1. INTRODUCTION

In an age that is sophisticated and led by various technologies, the information travels at lightning speed. You can access all the information at anywhere and anytime through any platform, but not every news or information that you have searching for is authentic, accurate or true. For example, social media platform, blogs, websites and instant messaging services is a powerful tool for communications, but they also become breeding ground for unverified or misleading information. MyVerify system MVS is a web-based system is an initiative by the Ministry of Communications and Multimedia Malaysia (KKMM) through the Malaysian Communications and Multimedia Commission (MCMC). It acts as a one-stop centre for people to check and channel unconfirmed news, received online through social media platform, instant messaging services, blogs, websites and others. This portal is a proactive by MCMC together with KKMM to combat fake news online where public can check the validity of information received.

1.1 PURPOSE

The aims of Software Requirement Specification (SRS) document are to outline the detailed description of the requirements and functionality for the myVerify System (MVS). This SRS document ensures simplicity and alignment throughout the development process by serving as an essential reference for all project stakeholders. Moreover, it serves as a communication tool among project stakeholders to ensure that everyone has a shared understanding of the MVS's requirements.

The expected readers of this SRS document are the project stakeholders which are Malaysian Communication and Multimedia Commission (MCMC) team, Developers of the MVS, Administrator, Relevant Agency, Software Quality Assurance Teams, and Public Person Representatives.

The scopes of this SRS document are, to outline all the functionalities of MVS and responsibility of every stakeholder who involved in this project. The myVerify System (MVS) is designed to allow public person to submit any news or articles from various social media platforms to confirm the authenticity of the news. Then, the MVS will analyse the submitted enquiries and classify the news either authentic or not based on reliable data sources from relevant agencies.

The responsibility that ties with this SRS document are SRS author who responsible for drafting and revising the SRS document based on project stakeholder feedback. MVS Development team who must follow the specification in this SRS document during implementation. Software Quality Assurance Teams who responsible for validating that all requirements have been aligned through testing processes. MCMC team, who responsible to monitor the project, providing resources, and making sure that every stakeholder involved agree with the SRS's requirements. Administrator who responsible for maintaining the MVS's operational integrity. Relevant Agency and Public Person who responsible to use the MVS ethically and follow the terms of services.

The security and privacy considerations associated with its use are data encryption to protect sensitive information from unauthorised access. User access control to establish clear roles and permissions in the MVS to limit access to sensitive functionalities.

1.3 SYSTEM OVERVIEW

The purpose of MyVerify System MVS that is developed under Malaysian Communications and Multimedia Commission (MCMC) is to promote digital literacy to provide platform to verify the authenticity of news before sharing it. This system will allow the public to verify the news with MCMC through the website by sending enquiries to verify the news validity. In this system, they filter out various inauthentic news by monitoring the information provided by users before it is posted on the website. This system should be develop based on Malaysia rules and regulations. The system is designed to be accessible via platforms by providing flexibility and convenience to all users. Therefore, the system is divided into several modules to focus on a certain element:

Module 1: Comprehensive profile data for all users

This module is to store and manage comprehensive user data. Since there are several users of this system like public person, MCMCs and the agencies. The module regulates user behavior in the system according to their roles. For instance, public users can only submit news for verification and view the status of their reports while the administrators have full access to manage submissions, complaints, and generate reports and the agencies have limited access to view and act on complaints assigned to them.

Module 2: Capability to submit forms for the verification of news validity

This module is to make it easier for members of the public to submit news for verification. The system provides an easy-to-use form interface that allows users to submit news details, such as screenshots, links, or other supporting documentation. This function is intended to assist users in confirming the accuracy of news they receive.

Module 3: Classification of complaint forms forwarded to the appropriate authorities

This module is to categorise and represent complaints to the appropriate authorities or entities. After system receive the complaints form from the public person, the MVS MCMC can view all the complaint forms. After that, all the complaint forms will be

automatic tagging of complaints based on categories for example misinformation, fake news, scams and many more. Once the complaint form is done tagged, it will automatically be forwarded to the relevant agencies such as Ministry of Health Malaysia (KKM) for verify the complaint forms either they are truth or fake news.

Module 4: Monitoring the progress of the relevant organisations about the submitted issue

This module ensures that the myVerify System (MVS) can effectively track the progress of issues submitted by users (e.g., news or articles) to the relevant agencies. By doing this, they can monitor how each agency is responding to the questions, making sure they are handled successfully and swiftly. Users are automatically notified of status changes via SMS or email.

MCMC developed MVS as a system that would help it achieve a certain level of digital literacy through the verification of news before sharing. In the system, public users will be able to submit, via a user-friendly interface, news to be verified, with complaints categorized and then forwarded for validation to relevant authorities such as the Ministry of Health. It also helps track the progress of submitted issues for timely resolution and sends notifications to the concerned user via SMS or email. With modules related to user profile management, news submission, complaint categorization, and progress monitoring, the system assures accessibility, ease, and adherence to Malaysia's regulations in order to facilitate responsible news sharing.

2. PRODUCT DESCRIPTION

2.1 PRODUCT PERSPECTIVE

The MyVerify System (MVS) is designed as a web-based application that work for verifying the authenticity of the news and information received through online platforms. While MVS operates independently, it also interacts with various external entities, including relevant agencies, the public, and MCMC to ensure effective verification of the news.

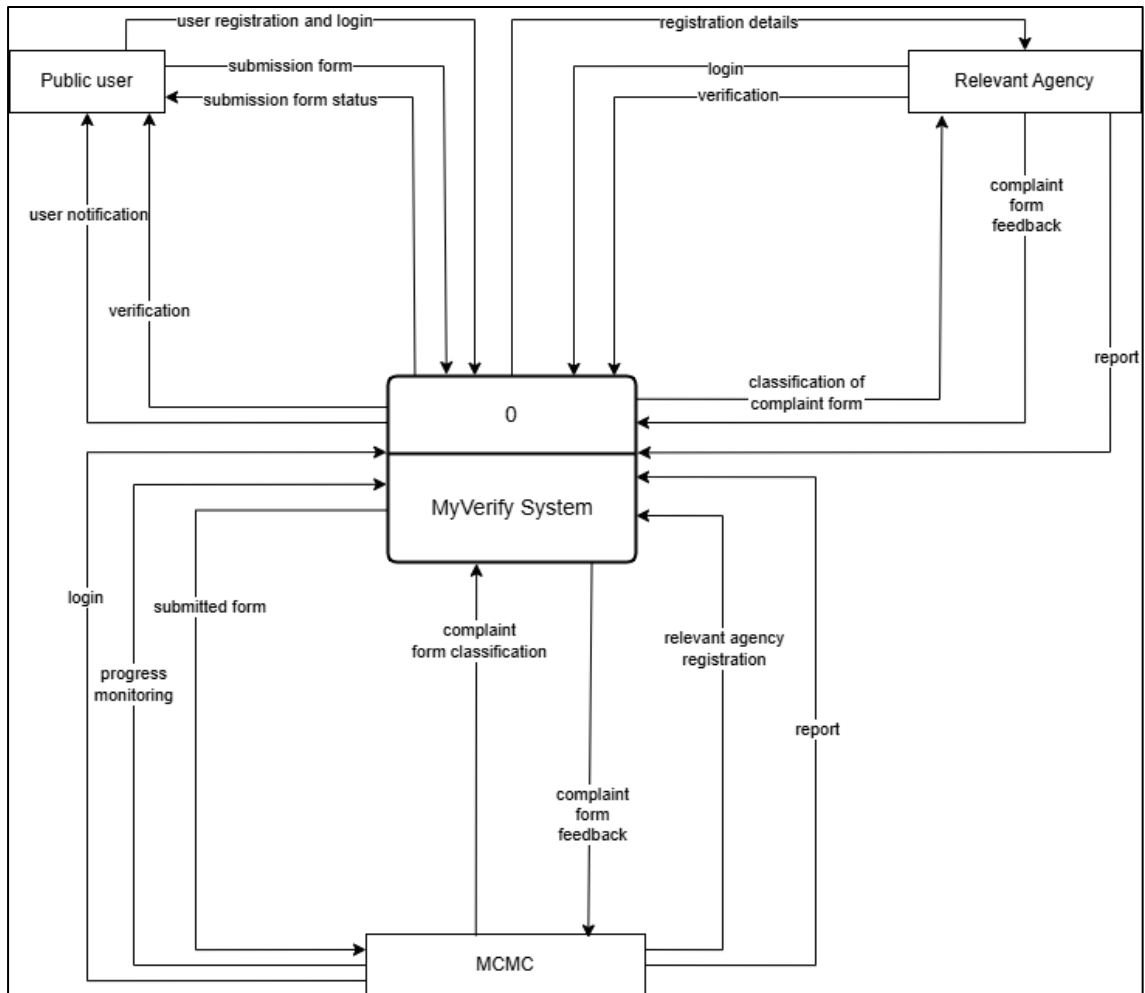

Figure 2.1 Context Diagram

The context diagram explanation:

The First external entity is Public User. Public User need to register and login to the myVerify System (MVS). Then, the public user can submit the news to be verify to the MVS. After the submission, the public user can view their submission status about the approval of the submission, the agency that the submission sent to, and authenticity of the submission. The MVS can notify the public user by notification for each status.

The second external entity is Relevant Agency. The registration details of the relevant agencies will be sent to their email address. Next, the relevant agencies will login to the MVS using the registration details provided by the MCMC. After that, relevant agencies will receive the related complaint forms to be verify to their related information. Once relevant agencies finished verifying the complaint forms, they will send the feedback authenticity of the complaint form to the MVS. Lastly, relevant agencies will generate report to the MVS.

The third entity is MCMC. MCMC will login into the MVS. After that, MCMC can monitor the progress of the system. Next, MCMC can view all the submissions from the public user and classify them using the Artificial Intelligent (AI). Once they finish the classification, it will send back to the MVS. Then, MCMC can confirm the report. The report feedback will receive to the MCMC. Then, the MCMC is the one that register the relevant agency to the MVS and sending the registration details via their email. Lastly, the MCMC will generate the report.

PRODUCT FUNCTION

The MVS includes many functions that help users to verify news on the MCMC website. The first is the MVS website should be able to submit forms to validate the authenticity of the news. This is to encourage users to verify the news before sharing it. The MCMC should also be able to monitor the progress of the relevant organizations in the submitted news. The verification starts when the form is sent to the relevant agencies. Then the agencies will validate the authenticity of the news. Finally, the agencies will update the MCMC about the authenticity of the news.

The MVS will also be able to classify all the complaint forms submitted using Artificial Intelligent (AI) to the relevant authorities according to the class. Complaint forms that are sent by the user are classified into different types of complaints. The MVS shall also be able to have comprehensive data of all users. When registering an account, user data such as name, phone number and email are collected for the MCMC to verify the user. Finally, the MCMC will be able to write reports about all the data from before. The reports include all the data mentioned above and then sent to the MyVerify System.

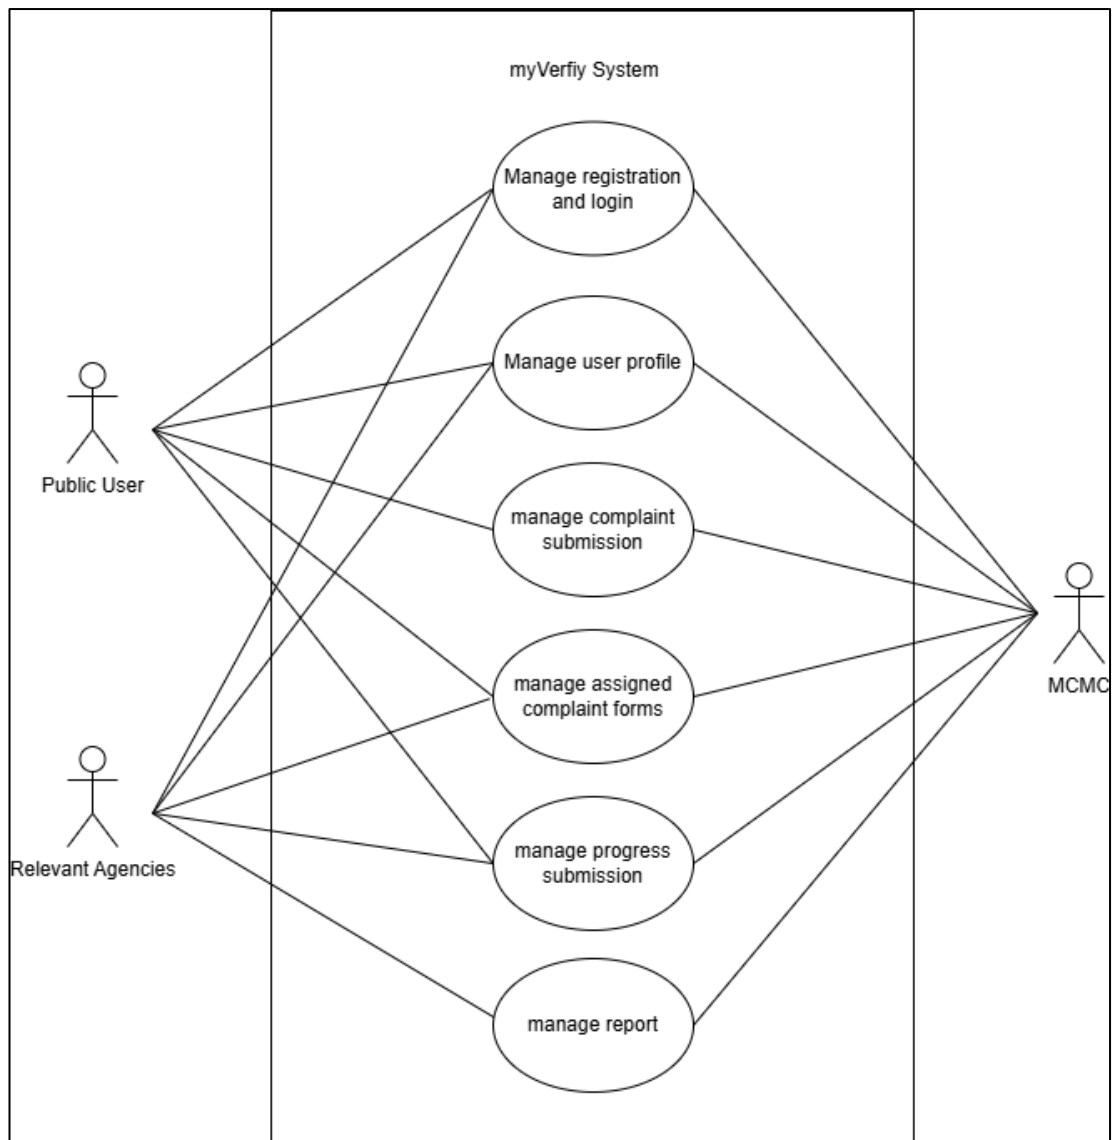

Figure 2.2 Use Case Diagram

2.2 USER CHARACTERISTICS

The MVS system mainly has 3 main users which are public person, administrator and agencies.

The **Public Users** vastly vary from 6 years old primary schooler to educated people on the work force. This means in terms of educational level, experience and technical expertise varies greatly between them. This difference in educational level needs to be considered when developing the system.

MCMC are the main people who handle the MyVerify system. They have a high-level education, experience and technical expertise due to being familiar with the news industry. Administrators need to have a high level of technical knowledge for the system to run smoothly.

As for the **Relevant Agencies** involved, they are agencies that submit news to the internet. The agencies have high-level education and experience however their technical expertise is a bit low. They have a high level of experience and knowledge due to their job requiring them to collect information.

3. SPECIFIC REQUIREMENTS (SOFTWARE PRODUCT FEATURES)

3.1 MANAGE USER PROFILE ,MANAGE REGISTRATION AND MANAGE REPORT

PIC: NURSABRINA ALIYYA BINTI AZIZAN(CB23056)

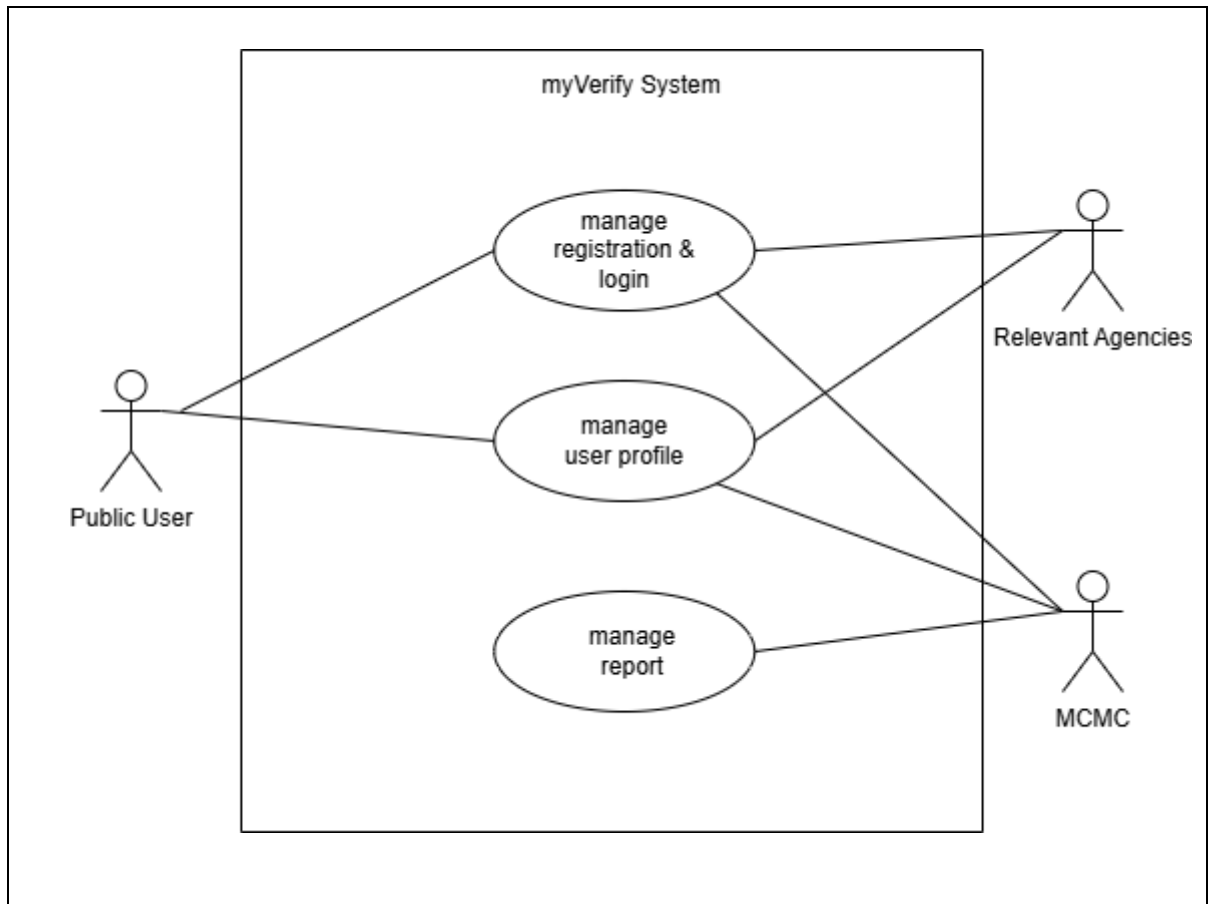

Figure 3.1 Manage Registration & Login, Manage User Profile, Manage Report use case

Manage Registration & Login Use Case Description

Table 3.1 Use Case Description for Manage Registration & Login

Use Case ID	MVS_SRS_UC001
Brief Description	This use case describes the process for public users to register for an account and log into the myVerify System. It also outlines how MCMC can register the MCMC staff and Agency staff.

Actor	Public User, Relevant Agencies, MCMC
Pre-Conditions	The system is operational. Users must have internet access.
Basic Flow	Public User The use case starts when: 1. The Public User clicks on <<Register>> button. [] 2. The system displays the “Register” page. 3. The system prompts the Public User to enter their details. 4. The Public User enter their details on the registration form. 5. The Public User clicks on “Terms & Conditions” box. 6. The Public User clicks on <<Register>> button. 7. The system prompts the Public User to verify the account via email. 8. The Public User verify the account. 9. The system validates the input and confirm successful registration. 10. The Public User clicks on <<Login>> button. 11. The system displays the “Login” page. 12. The Public User enter their details. 13. The Public User clicks on <<Login>> button. 14. The use case ends Relevant Agencies The use case starts when: 1. The agency staff receive an email from MCMC regarding their registration account on the MVS. 2. The email also includes email and password for agency staff to login. 3. The agency staff clicks on “https.mvs.com” link. 4. The system prompts the MVS login page. 5. The agency staff enter their details. 6. The agency staff clicks <<Login>> button. 7. The use case ends. MCMC The use case starts when: 1. The system displays “Staff Registration” page. 2. The MCMC input the staff details. 3. The MCMC choose between “Agency Staff” and “MCMC staff” for their role. 4. The MCMC clicks on <<Register>> button. 5. The system displays pop up message “Registration Successful! Verification email sent to staff!”.

	6. The use case ends.
Alternative Flow	A1: Forgot Password 1. The user clicks "Forgot Password". 2. The system prompts the user to enter their email address to receive password reset instructions.
Exception Flow	Non-Applicable
Post-Conditions	Public User, Relevant Agencies and MCMC can log into the MVS.
Rules	Passwords must meet minimum requirements. Email addresses must be valid and not previously registered.
Constraints	The system must handle concurrent login attempts securely to prevent unauthorized access.

Manage Registration & Login Sequence Diagram

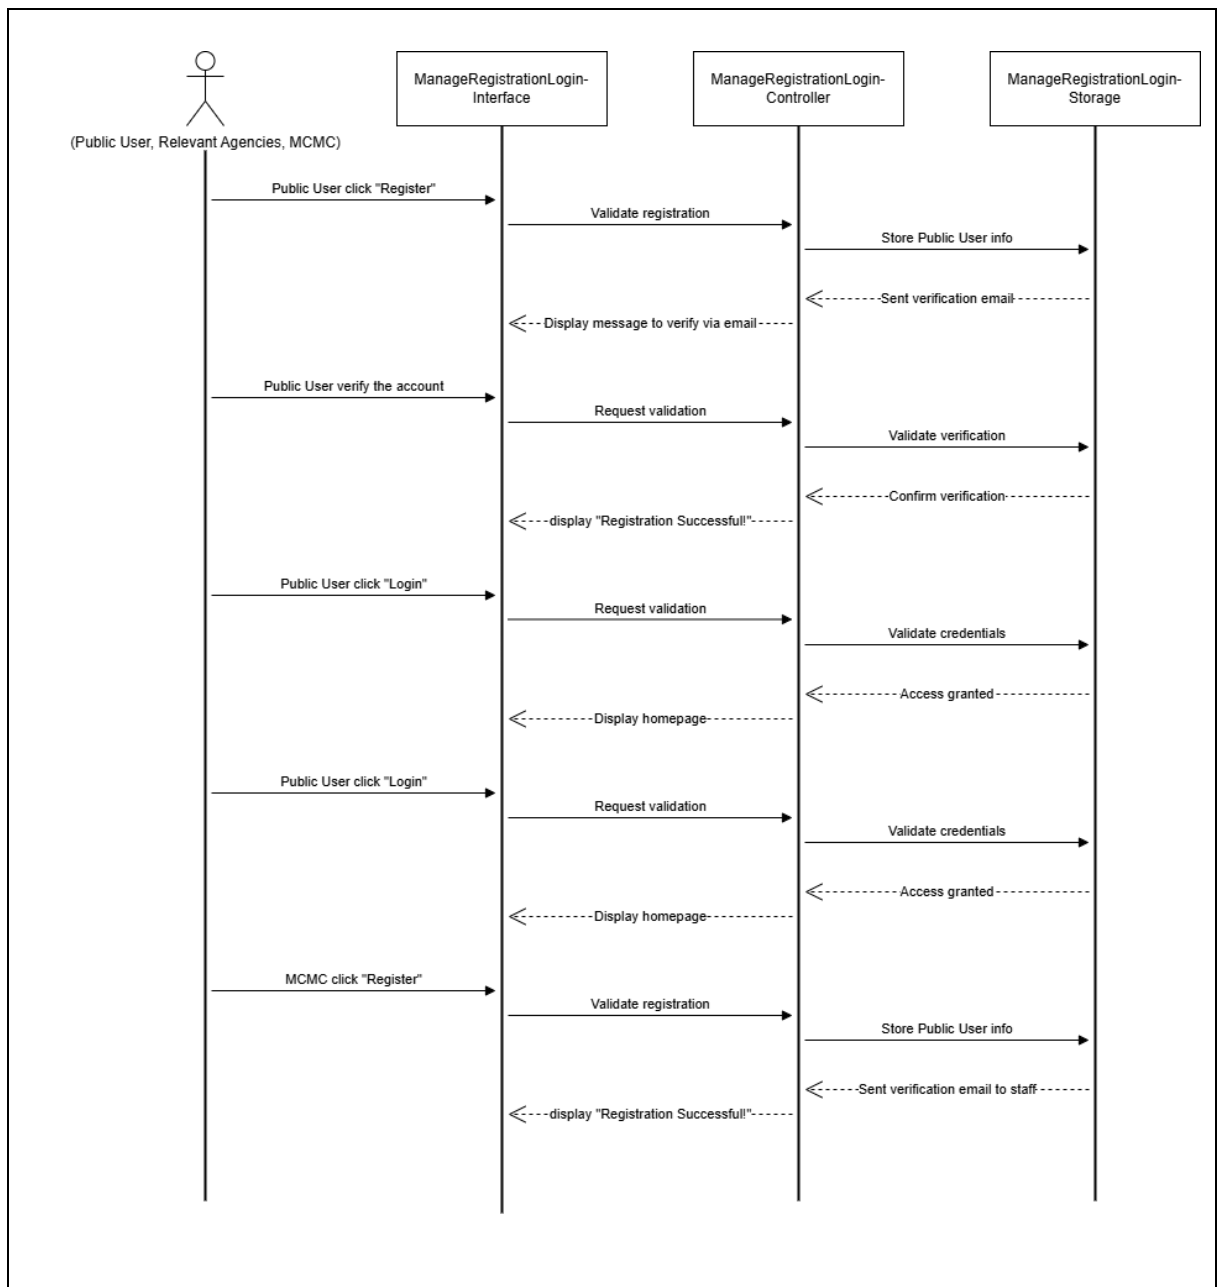

Figure 3.2 Basic Flow for Manage Registration & Login

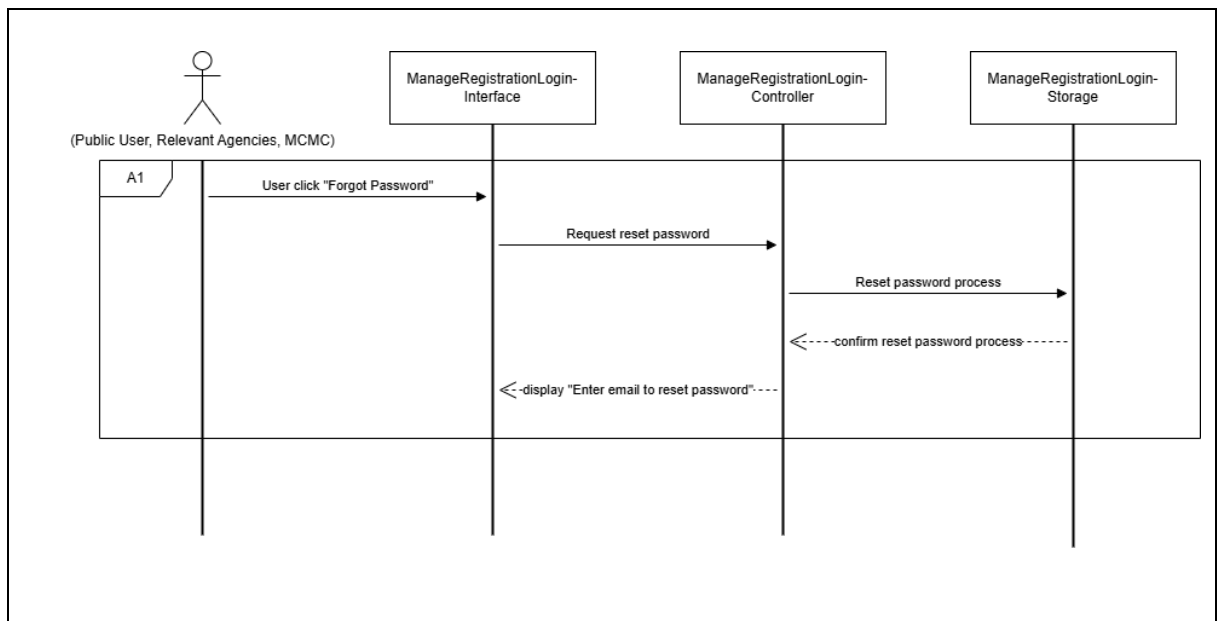

Figure 3.3 Alternative Flow for Registration & Login

Figure 3.4 Exception Flow for Registration & Login

Manage Registration & Login User Interface

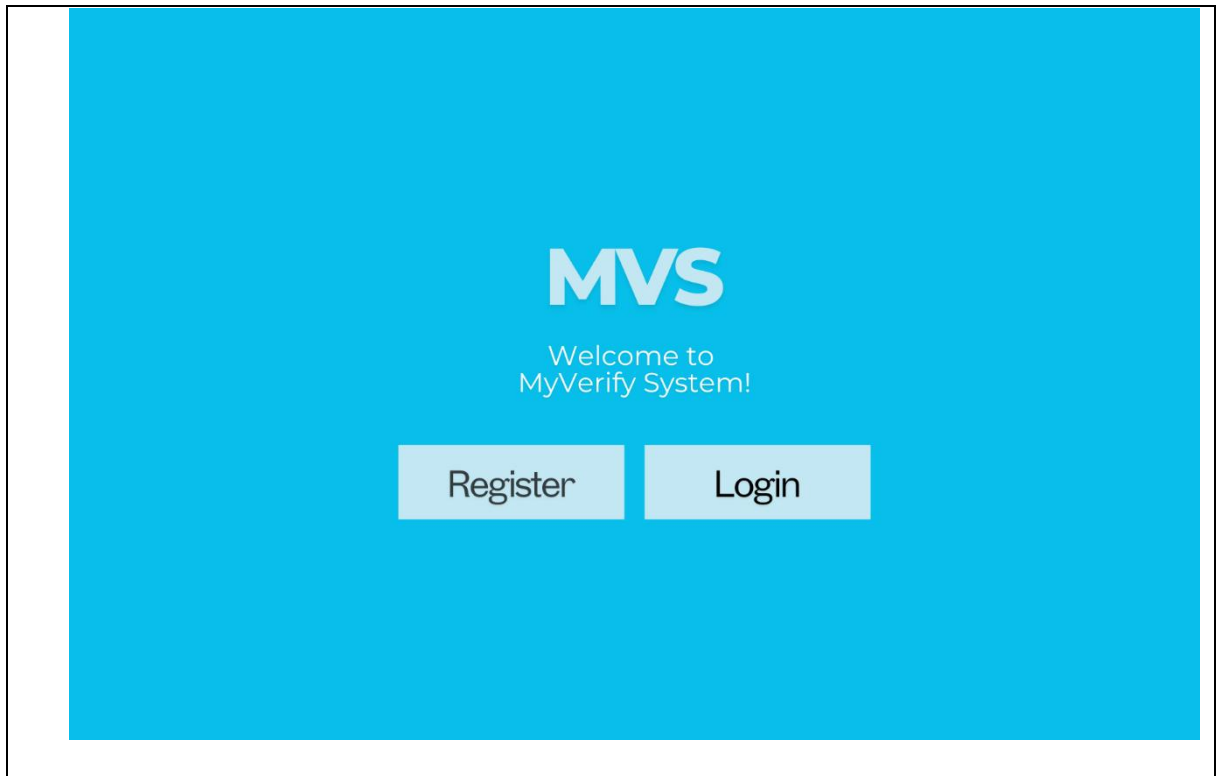

Figure 3.5 Welcome Interface

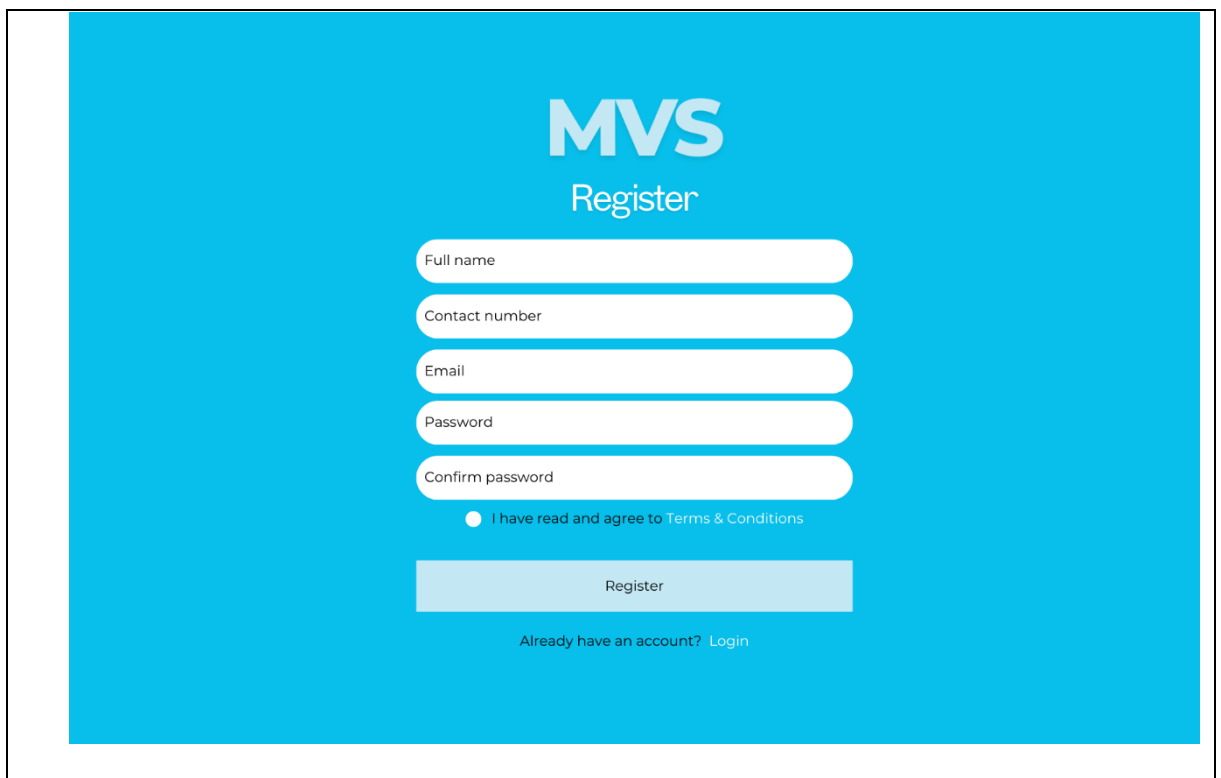

The image shows a registration interface for the MVS (MyVerify System). It features a solid blue background. At the top center, the letters "MVS" are displayed in a large, white, bold, sans-serif font. Below the logo, the word "Register" is written in a smaller, white, sans-serif font. Below this, there are five white, rounded rectangular input fields stacked vertically. The labels for these fields are "Full name", "Contact number", "Email", "Password", and "Confirm password", all in a small, dark blue, sans-serif font. Below the input fields, there is a small white radio button followed by the text "I have read and agree to Terms & Conditions" in a small, dark blue, sans-serif font. At the bottom center, there is a light blue rectangular button with rounded corners labeled "Register" in a dark blue, sans-serif font. Below this button, the text "Already have an account? Login" is written in a small, dark blue, sans-serif font.

Figure 3.6 Registration Interface

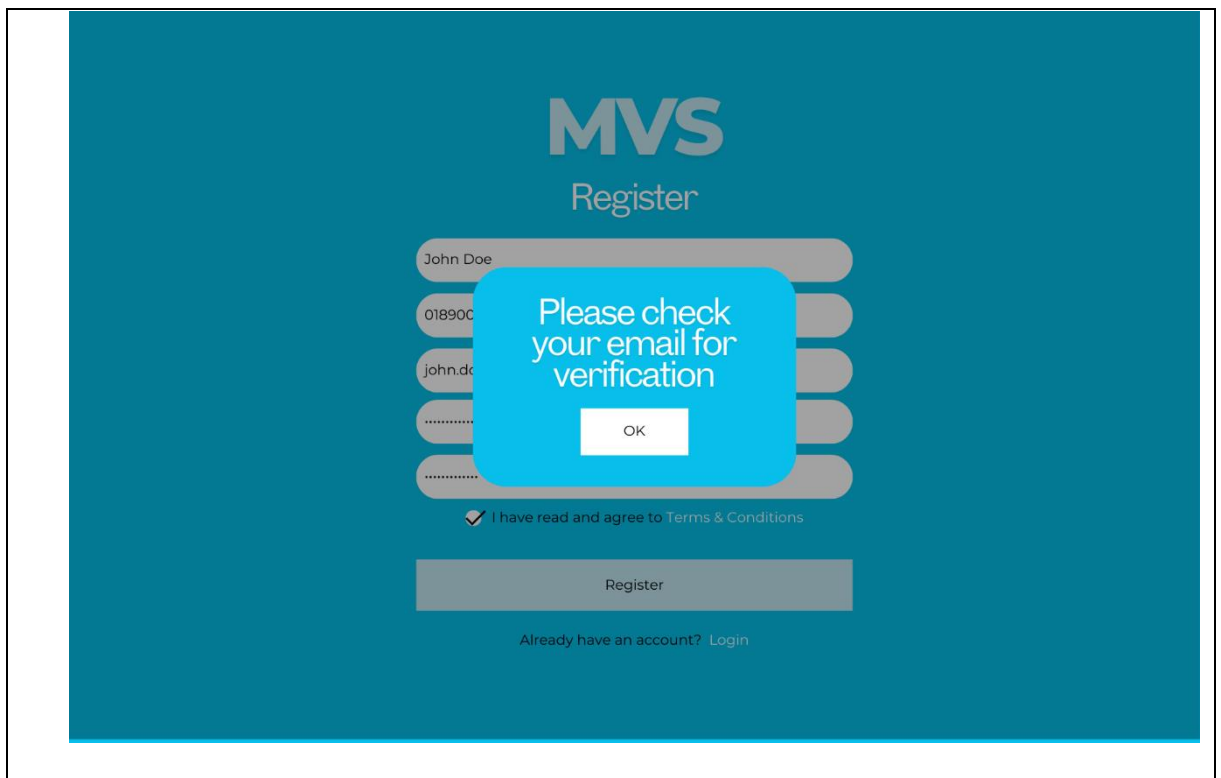

Figure 3.7 Verify Email

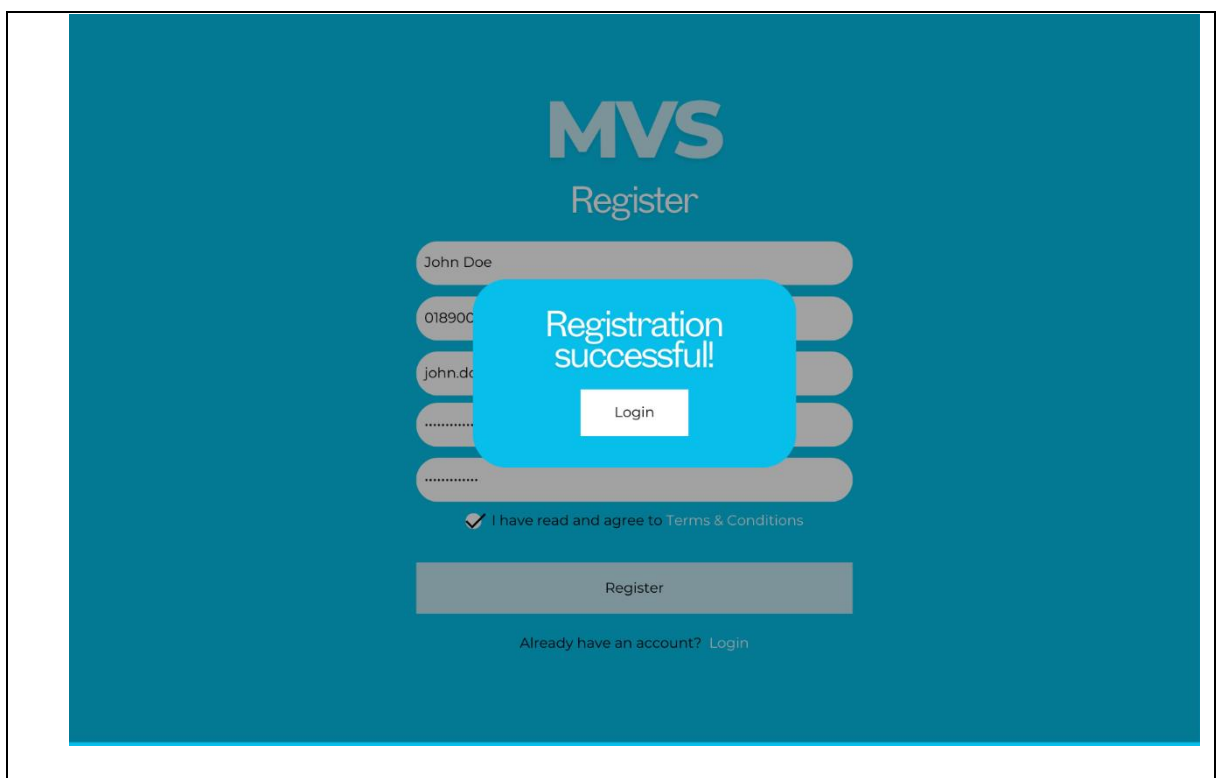

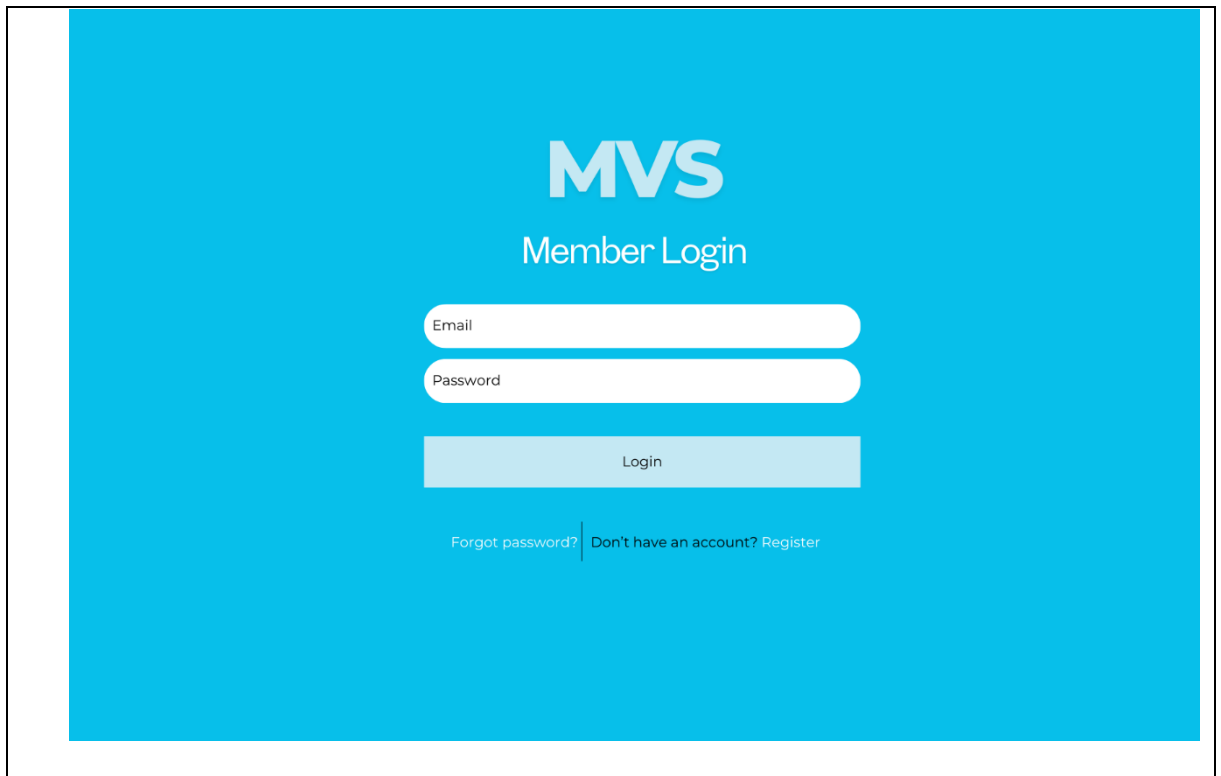

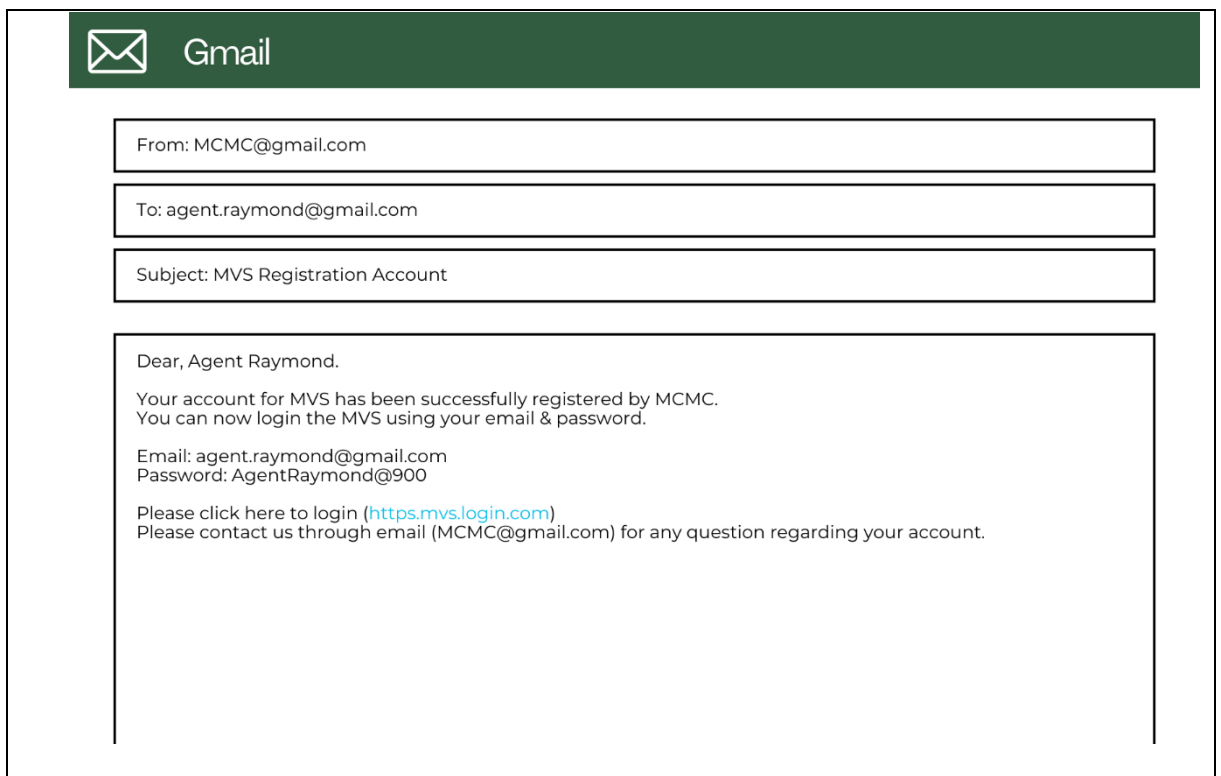

Figure 3.8 Registration Successful

The image shows a web interface for MVS Member Login. It features a bright blue background. At the top center, the text "MVS" is displayed in a large, white, sans-serif font. Below it, "Member Login" is written in a smaller, white, sans-serif font. There are two white input fields with rounded ends: the first is labeled "Email" and the second is labeled "Password". Below these fields is a light blue rectangular button with the word "Login" in white. At the bottom, there are two links in white text: "Forgot password?" and "Don't have an account? Register".

Figure 3.9 Login Public User Interface

The image shows an email interface with a dark green header bar. On the left of the header is a white envelope icon, and to its right is the word "Gmail" in white. Below the header, the email content is displayed in a white box with a black border. The email headers are as follows:

- From: MCMC@gmail.com
- To: agent.raymond@gmail.com
- Subject: MVS Registration Account

The body of the email contains the following text:

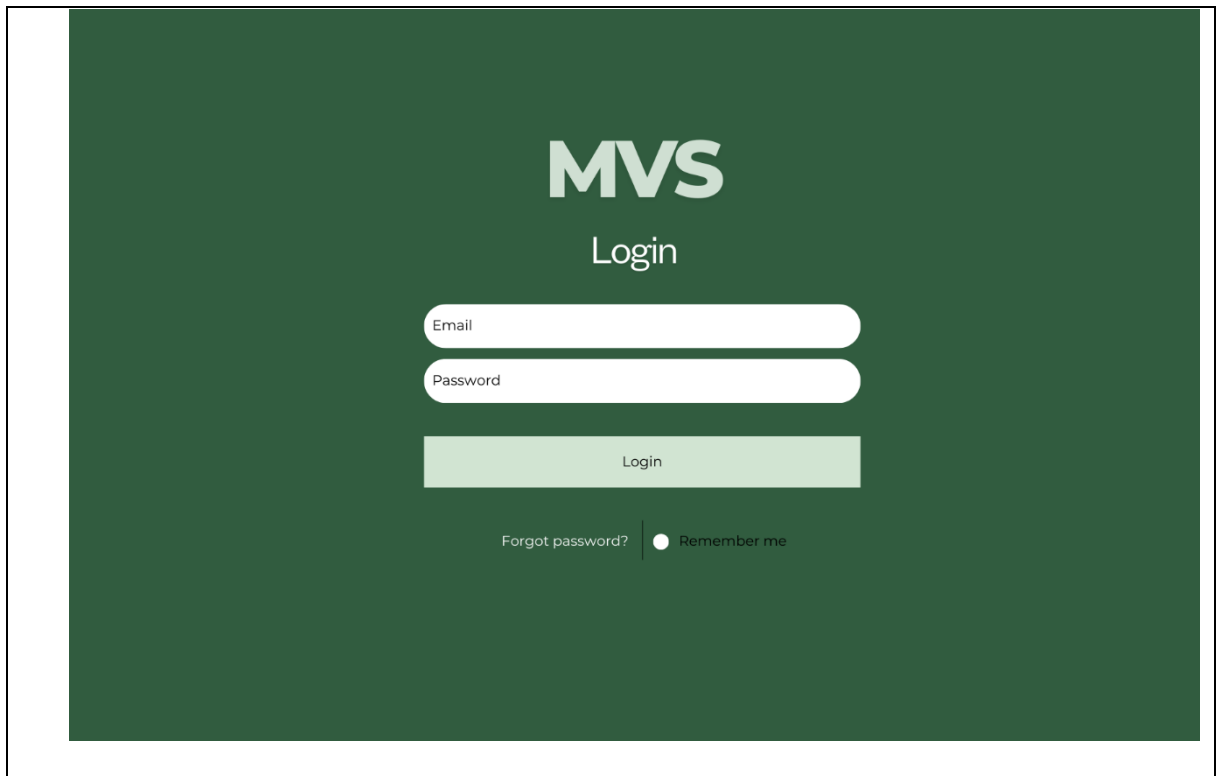

Dear, Agent Raymond.

Your account for MVS has been successfully registered by MCMC.
You can now login the MVS using your email & password.

Email: agent.raymond@gmail.com
Password: AgentRaymond@900

Please click here to login (<https.mvs.login.com>)
Please contact us through email (MCMC@gmail.com) for any question regarding your account.

Figure 3.10 Email Agency Interface

The image shows a login interface for the MVS system. It features a dark green background with the 'MVS' logo in white at the top center. Below the logo is the word 'Login' in white. There are two white input fields for 'Email' and 'Password'. Below these is a green 'Login' button. At the bottom, there is a link for 'Forgot password?' and a radio button labeled 'Remember me'.

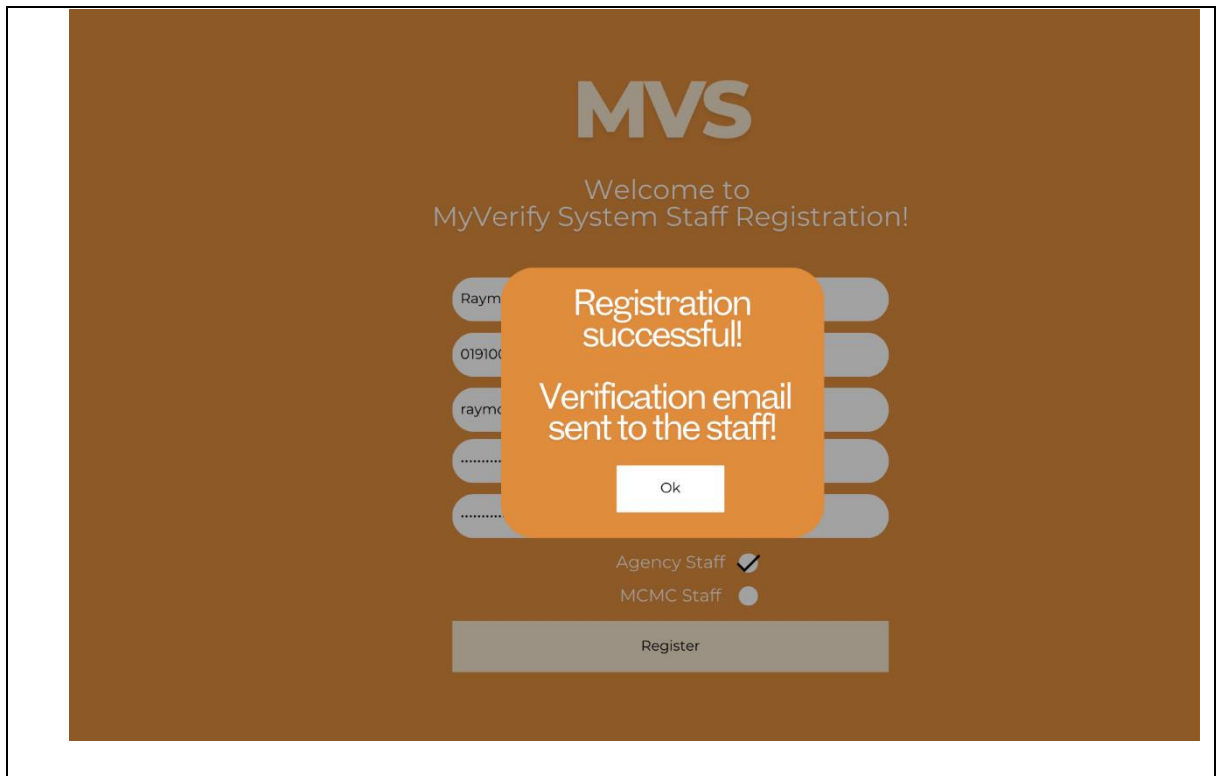

Figure 3.13 Registration Staff Successful

Table 3.2 Manage User Profile - User Interface Description

User Interface Name	Description
Welcome Interface	This interface welcomes users to the MyVerify System (MVS). It displays the title "MVS" and a welcoming message, "Welcome to MyVerify System!" Below, there are two clear action buttons: Register for new users to create an account and Login for returning users to access their accounts.
Register Interface	This interface allows new users to register. It features input fields for Username, Email, Password, and Confirm Password, along with a checkbox for agreeing to the Terms & Conditions. A Register button is also displayed, and there's a prompt for existing users to login
Verify Email	This interface informs users that they need to verify their email after registration. It features a pop-up message stating, "Please check your email for verification.". An OK button allows users to acknowledge the message.
Registration successful	This interface confirms successful registration for users. It a pop-up message stating, "Registration successful!" A Login button allows users to proceed to the login page.

Login Public User Interface	This interface is designed for public user login. Public Users are prompted to enter their Email and Password in designated fields. Below the fields, there are options for users who may have forgotten their password or need to sign up for an account. The Login button allows users to access their accounts.
Email Agency Interface	This interface shown an email sent to agency staff regarding their MVS account. It also include password and link to MVS login interface.
Login Agency Interface	This interface is designed for Agency Staff login. Agency staff are prompted to enter their Email and Password in designated fields. Below the fields, there are options for users who may have forgotten their password or need to sign up for an account. The Login button allows users to access their accounts.
Registration Staff Interface	This interface is designed for MCMC register their staff and agency staff. MCMC required to input the staff details such as Name, Email, Contact Number, Password and Confirm Password. MCMC need to choose the role between “MCMC staff” or “Agency Staff” before click on <<Register>> button.
Registration Staff Successful	This interface shown pop up message stating “Registration Successful! Verification email sent to staff!”. This message pop up after MCMC register a staff with correct input.

Manage User Profile Use Case Description

Table 3.3 Use Case Description for Manage User Profile

Use Case ID	SRS_MVS_UC002
Brief Description	This use case describes the interactions between various actors and the system to manage user profiles. It includes functionalities for profile viewing, editing, by public user and relevant agencies and searching by MCMC.
Actor	Public user, Relevant Agencies, MCMC
Pre-Conditions	Public User, Relevant Agencies, MCMC is logged in to the system.

Basic Flow	Public User The use case starts when: 1. The Public User clicks on “Profile” section from the side menu. 2. The system displays the Public User profile information. 3. The Public User decides to edit their profile and clicks on <<Edit Profile>> button. 4. The system prompts for editable fields. 5. The Public User edit their profile and clicks on <<Save>> button. 6. The system updates the profile. 7. The use case ends. Relevant Agencies The use case starts when: 1. The Relevant Agency clicks on “Profile” section from the side menu. 2. The system displays the Relevant Agency profile information. 3. The Relevant Agency decides to edit their profile and clicks on <<Edit Profile>> button. 4. The system prompts for editable fields. 5. The Relevant Agency edit their profile and clicks on <<Save>> button. 6. The system updates the profile. 7. The use case ends. MCMC The use case starts when: 1. The MCMC clicks on “Profile Management” section from the side menu. 2. The system displays the User List page. 3. The MCMC clicks on <<Search>> button to search for user. 4. The MCMC enter the username of the user. 5. The system displays the searched user. 6. The MCMC clicks on <<View>> button. 7. The system displays the selected user profile details. 8. The use case ends.
Alternative Flow	A1: Cancel Action 1. The Public User and Relevant Agency decides to cancel editing their profile.

	2. The Public User and Relevant Agency clicks on <<Cancel>> button.
Exception Flow	E1: Exit System 1. The Public User, MCMC and Relevant Agency decides to exit the system. 2. The Public User and Relevant Agency clicks on <<Logout>> button. 3. The system terminate the session.
Post-Conditions	User profile are created, updated and searched. Public user and relevant agencies can view and edit their profile. MCMC can search and view user profile.
Rules	User password must meet specified criteria (at least contain 8 characters and one special character).
Constraints	Only MCMC can search user profile.

Manage User Profile Sequence Diagram

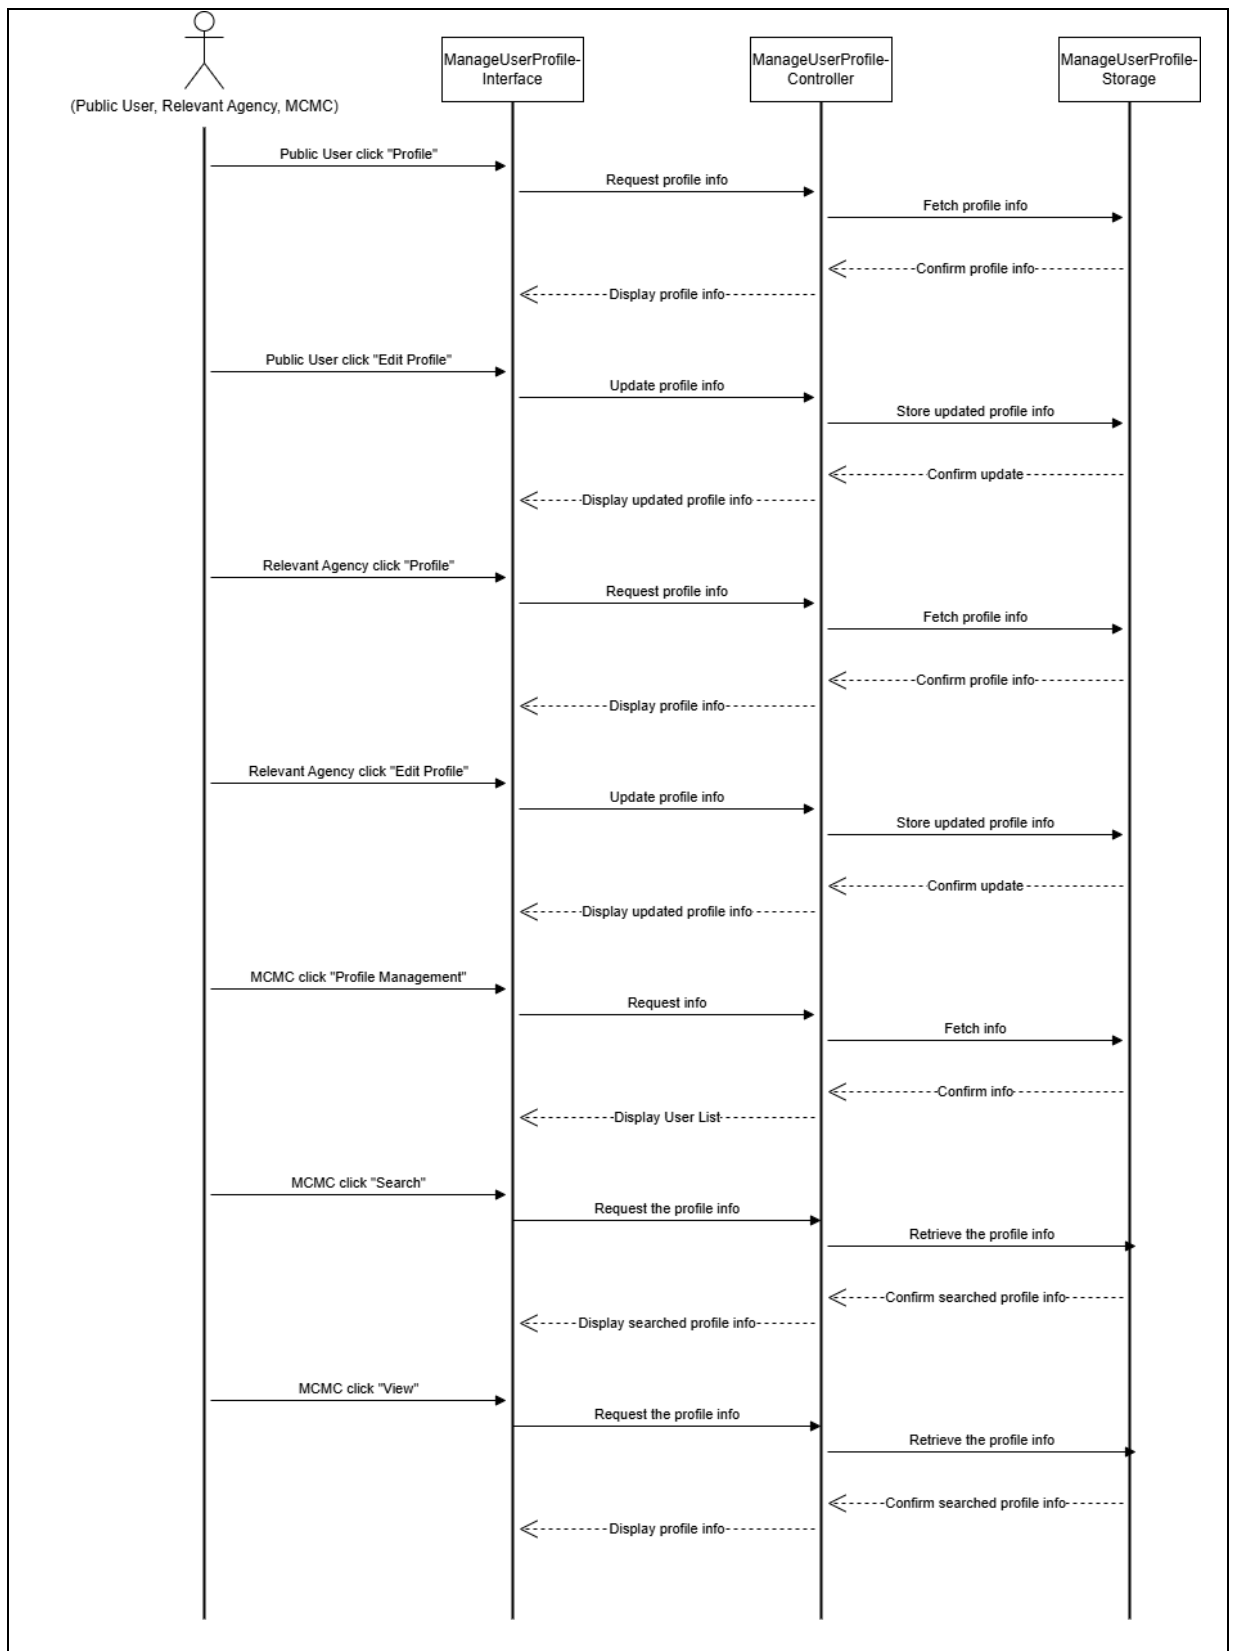

Figure 3.14 Basic Flow for Manage User Profile

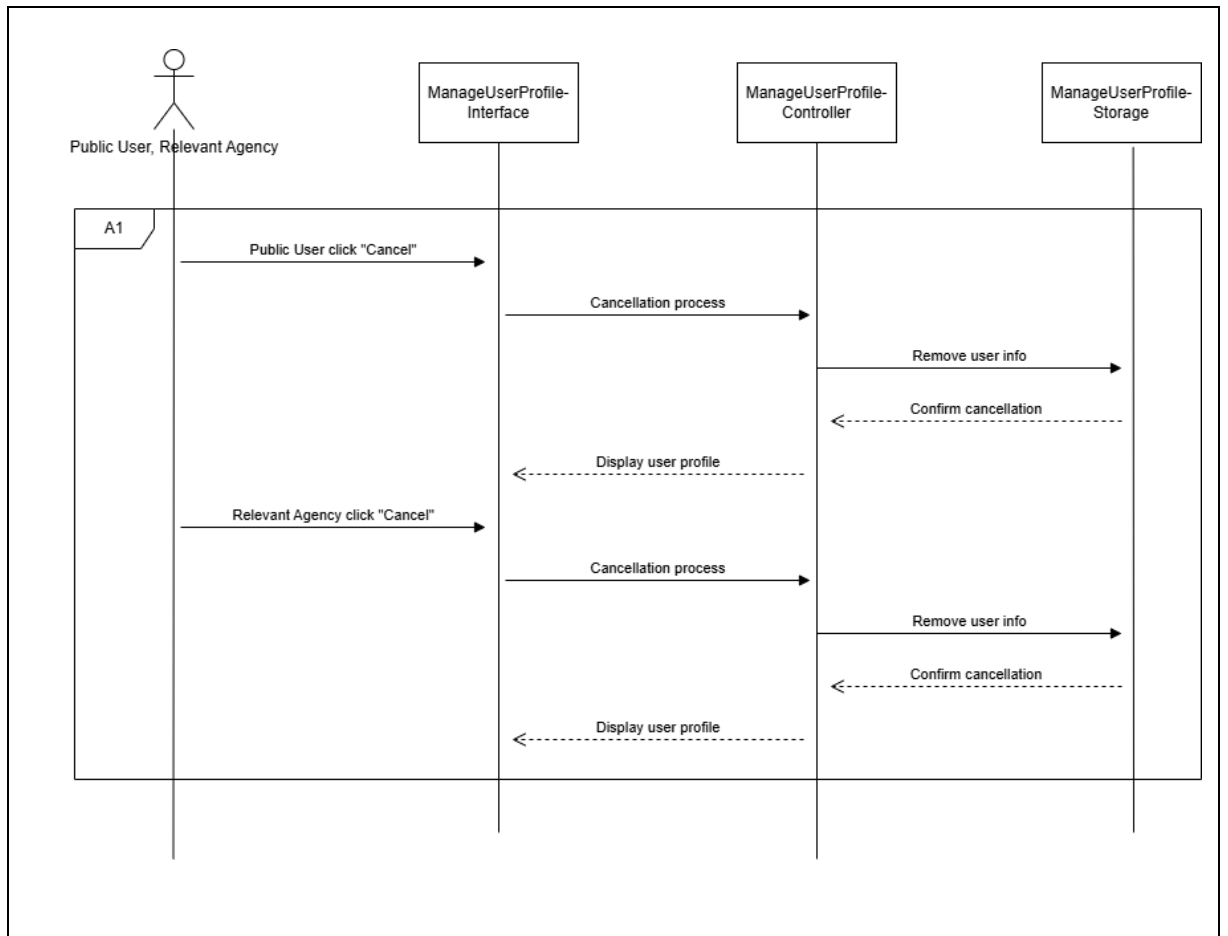

Figure 3.15 Alternative Flow for Manage User Profile

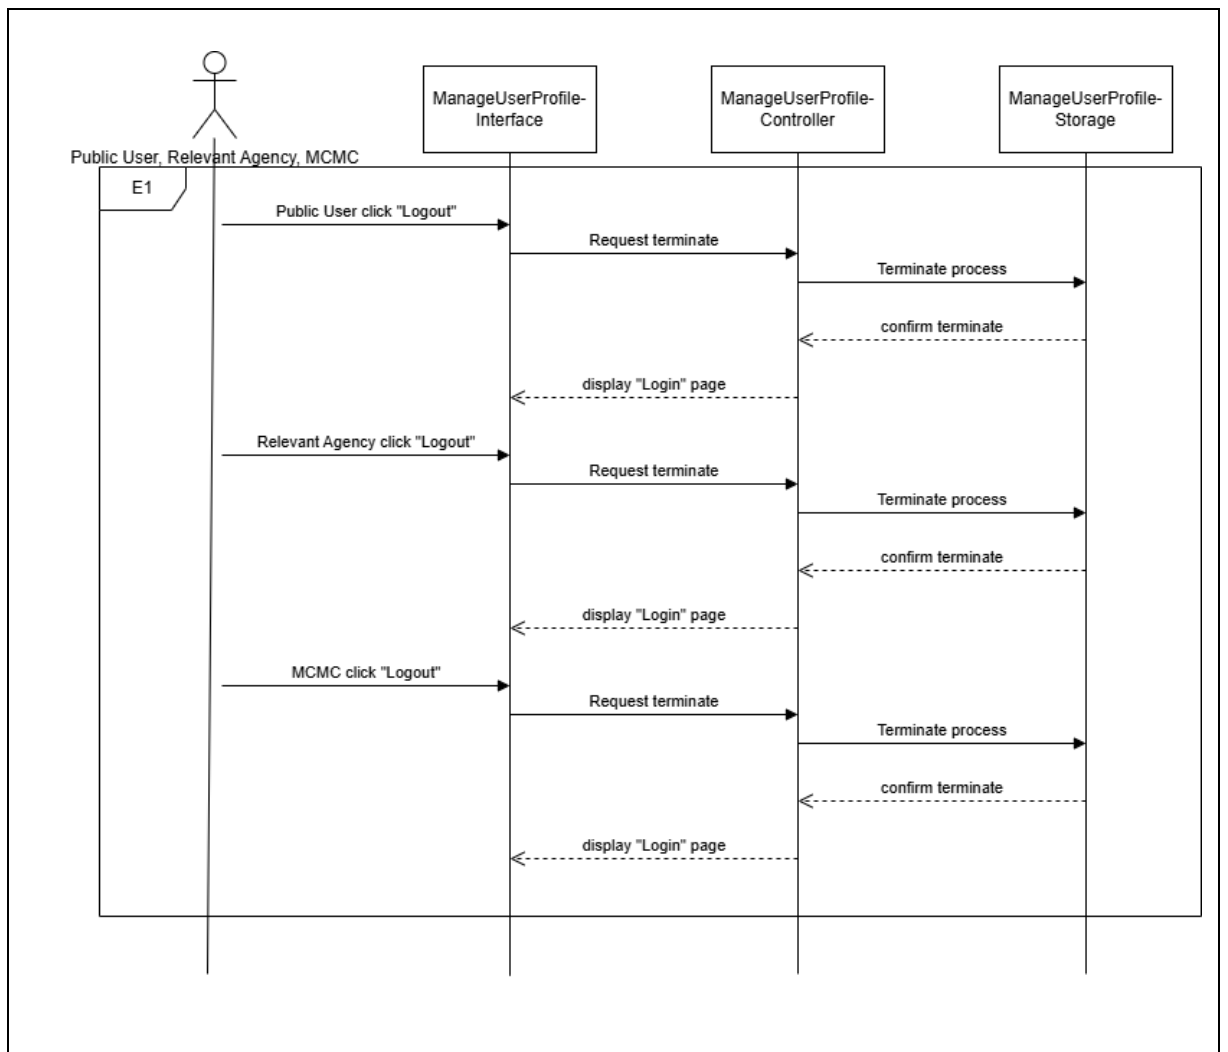

Figure 3.16 Exception Flow for Manage User Profile

Manage User Profile User Interface

The screenshot displays the 'Profile' page of the MVS system. On the left is a vertical navigation menu with the MVS logo and a hamburger menu icon. The menu items are: Dashboard, Profile (highlighted), Form Submission, Complaint Management, Complaint Progress, Messages, Generate Report, and Settings. The main content area has a blue header with the word 'Profile' and a user profile icon labeled 'john_doe'. Below the header is a large light blue box containing a circular profile picture placeholder. To the right of the picture are input fields for 'Full Name' (John Doe), 'Contact Number' (018900867), 'Email' (john.doe@gmail.com), and 'Password' (masked with dots). At the bottom of this box are two buttons: 'Edit Profile' and 'Logout'.

Figure 3.17 Public User View Profile

This screenshot shows the 'Edit Profile' form in the MVS system. The navigation menu on the left is identical to the previous figure, with 'Profile' highlighted. The main content area has the same blue header with 'Profile' and the 'john_doe' user icon. Below the header is a light blue box with a profile picture placeholder. To the right of the picture are input fields for 'Full Name' (John Doe), 'Contact Number' (018900867), and 'Email' (john.doe@gmail.com). To the right of these is a section for password changes with fields for 'Password' and 'Confirm Password', both masked with dots. At the bottom of the form are two buttons: 'Save' and 'Cancel'.

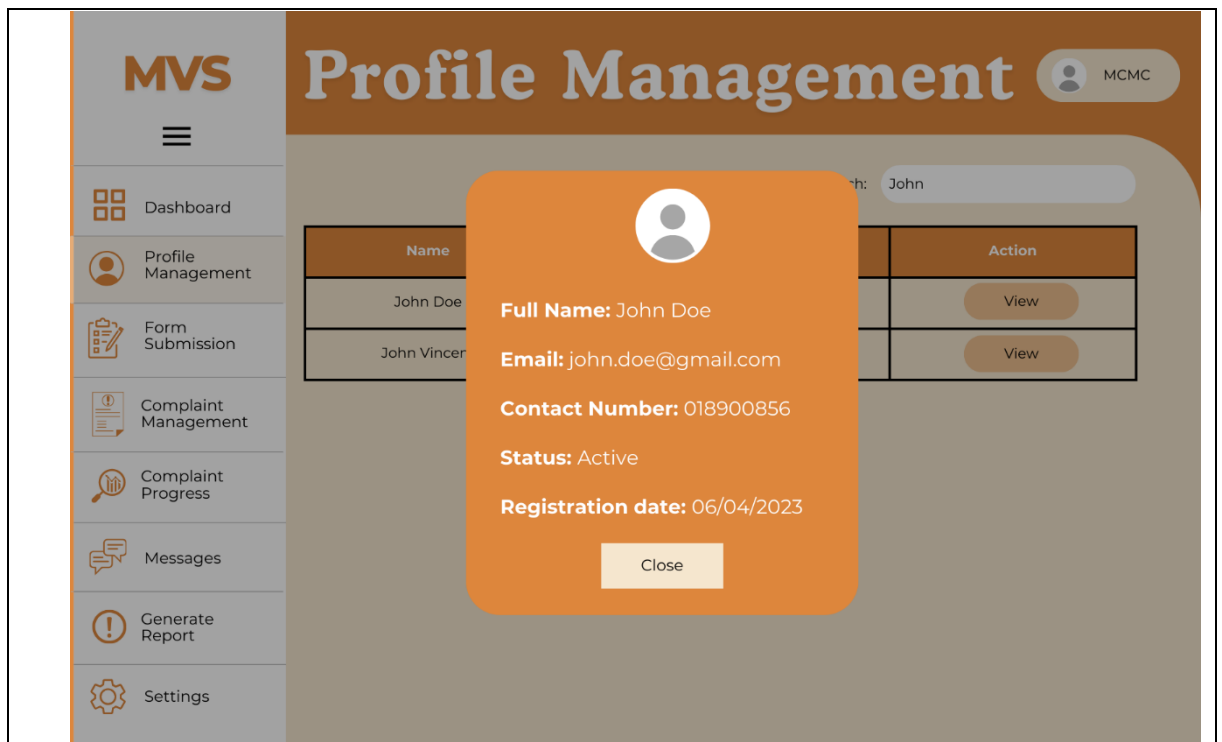

Figure 3.23 MCMC View Profile

Table 3.4 Manage User Profile - User Interface Description

User Interface Name	Description
Public User View Profile	The interface features a user profile page. It also display side menu for navigation such as Dashboard, Profile, Form Submission, Complaint Management, Complaint Progress, Messages, Generate Report, and Settings. The main Profile section displays the user's Username, Email, and a hidden Password field, along with buttons for "Edit Profile" and "Logout."
Public User Edit Profile	The interface displays a user profile page with a side menu for navigation. The main section shows fields for Username, Email, Password, and Confirm Password, along with Save and Cancel buttons.
Relevant Agency View Profile	The interface features a user profile page. It also display side menu for navigation such as Dashboard, Profile, Form Submission, Complaint Management, Complaint Progress, Messages, Generate Report, and Settings.

	The main Profile section displays the user's Username, Email, and a hidden Password field, along with buttons for "Edit Profile" and "Logout."
Relevant Agency Edit Profile	The interface displays a user profile page with a side menu for navigation. The main section shows fields for Username, Email, Password, and Confirm Password, along with Save and Cancel buttons.
MCMC Profile Management	The interface shows a Profile Management page with an organized table. It includes a search bar for usernames and lists users with their usernames, emails, and an action column for viewing details and there's a logout option at the top.
MCMC Search	The interface displays a Profile Management page with a search bar. The table shows the name, email address, and a "View" action button.
MCMC View Profile	The interface now shows a pop-up detail view for the user "John Doe." It also display Name, Email, Status, and Registration Date. The pop-up has a close button.

Manage Report Use Case Description

Table 3.5 Use Case Description for Manage Report

Use Case ID	MVS_SRS_UC003
Brief Description	This use case allows the MCMC to view and manage user profile reports, which includes displaying the total number of registrations, new registrations, active users, and inactive users. Additionally, it provides a chart showing monthly new registrations. An "Export to PDF" button is available to generate a report of the displayed data.
Actor	MCMC
Pre-Conditions	MCMC is logged in to the system.
Basic Flow	The use case starts when: 1. The MCMC clicks on "Generate Report" section. 2. The system will display the "Registration Report" page 3. The MCMC clicks on the <<Export PDF>> button 4. The system will generate a PDF report of the displayed data and prompts MCMC to download it. 5. The use case ends
Alternative Flow	Non-Applicable

Exception Flow	Non-Applicable
Post-Conditions	MCMC can view the user profile report. MCMC can generate and download the report in PDF format.
Rules	Non-Applicable
Constraints	Only MCMC have access to the user profile report.

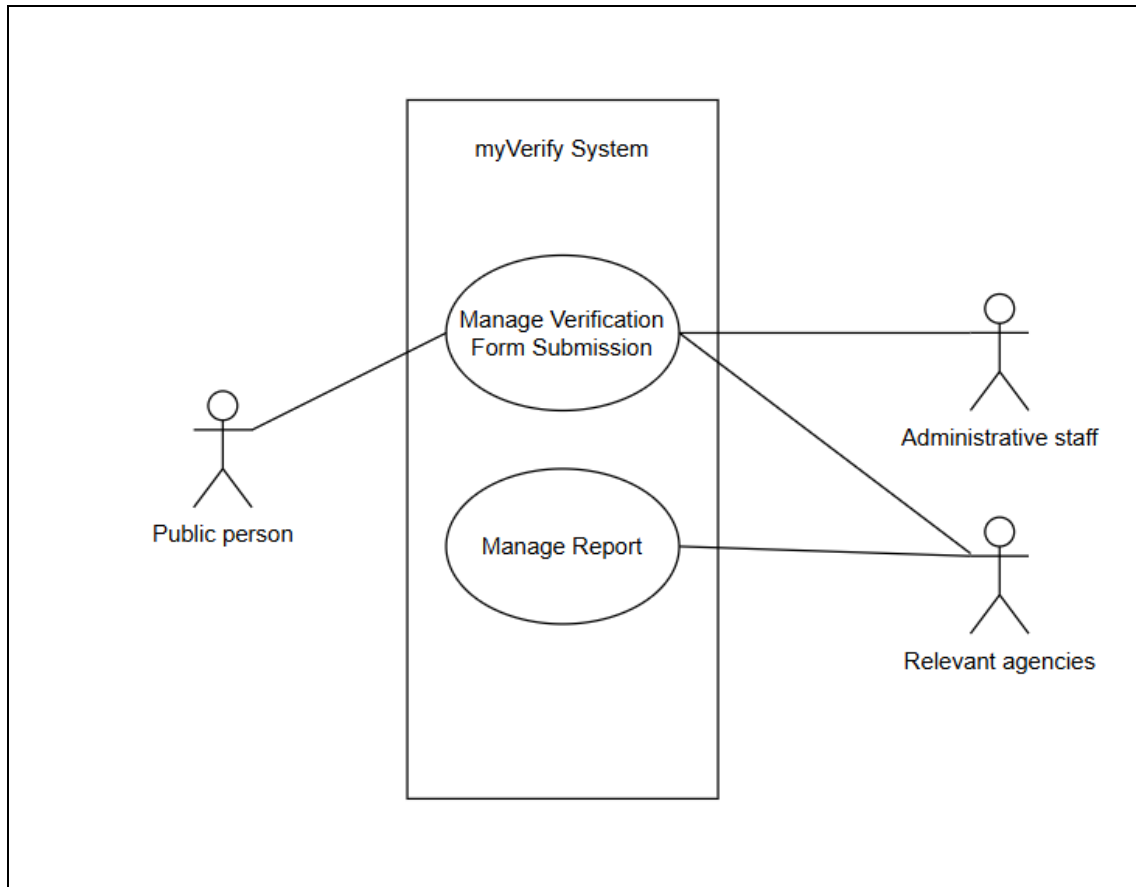

Figure 3.29 Manage Verification Form Submission and manage report use case

Manage Verification Form Use Case Description

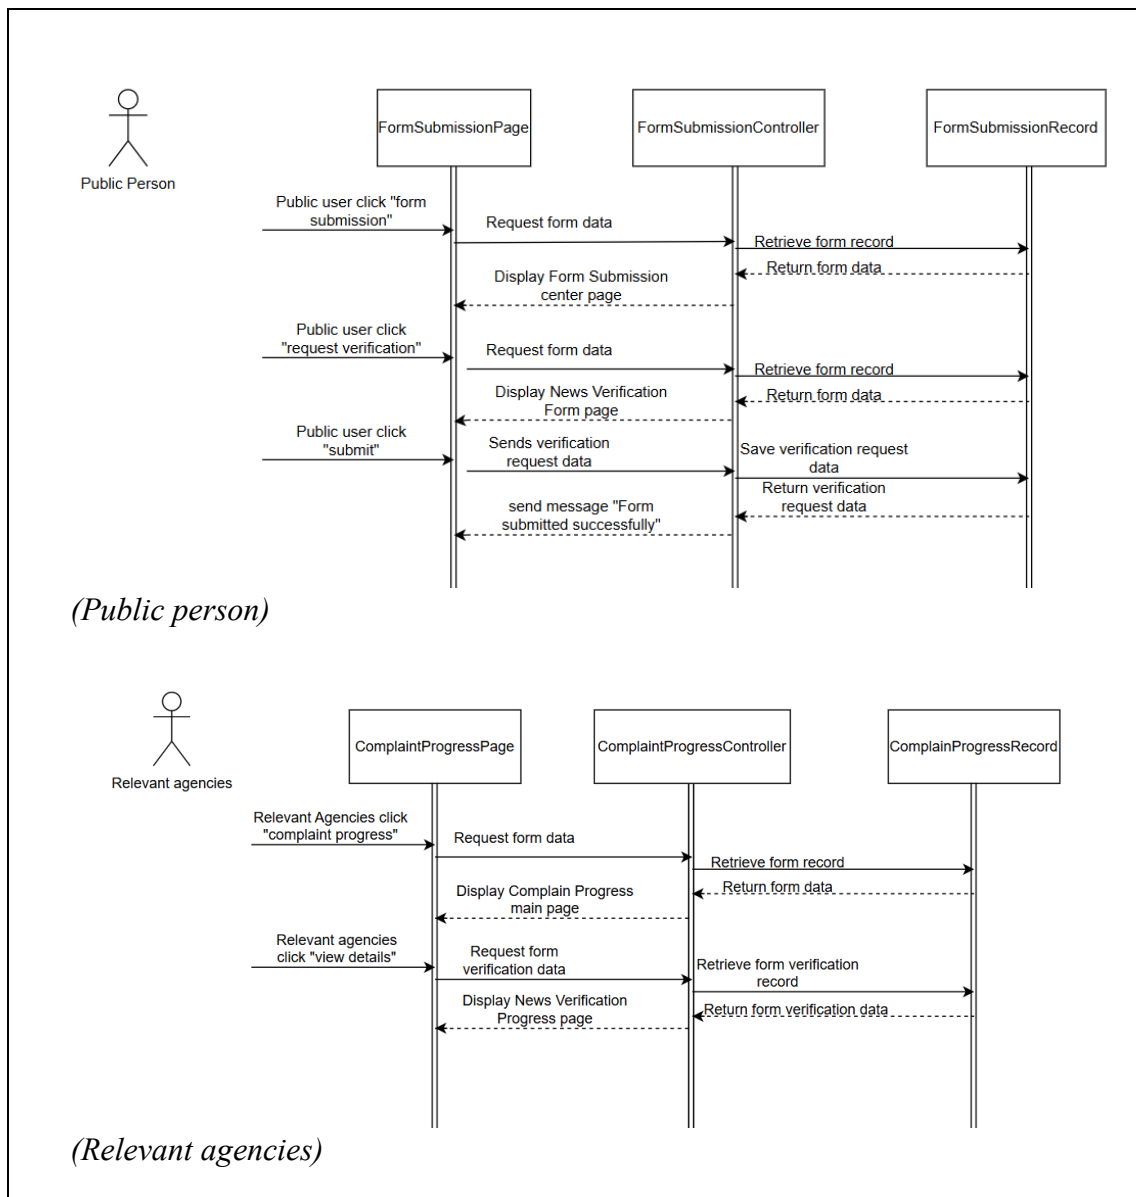

Table 3.7 Manage Verification Form Submission use case description

Use Case ID	SRS_MVS_UC004
Brief Description	This use case describes how public person submits verification form. The public person can send a news verification form by sending a link to the news and send additional documents to send to the relevant agencies. This use case also describes how relevant agencies and administrative staff can view the progress of the verification
Actor	Public person, administrative staff and relevant agencies
Pre-Conditions	1. Public persons, administrative staff and relevant agencies is connected to the internet

	2. Public person, administrative staff and relevant agencies is logged in the myVerify system
Basic Flow	Public person The use case starts when: 1. The public user clicks at the menu icon at the top left of the screen to reveal the menu contents 2. The public person clicks at the “Form Submission” at the side menu 3. The system will display the “Form Submission” page 4. The public user clicks on the “New Submission” button (<i>MVS_REQ_115</i>) 5. The system will display the “News Verification Form” page with mandatory fields to input which are News Link, News Title, additional documents and Comments. 6. The public user enters the URL news link 7. The public person enters the title of the news 8. The public user comments the details regarding why they sent the verification form 9. The public user uploads a supporting file to support the verification process 10. The public person clicks the “Submit” button to send the form 11. The public user can view the submitted form via the “Form Submission” page 12. The use case ends Administrative staff The use case starts when: 1. The administrative staff clicks at the menu icon at the top left of the screen to reveal the menu contents 2. The administrative staff clicks at the “Complaint Progress” at the side menu 3. The system will display the “Form Submission” page 4. The administrative staff clicks on the “View Details” button (<i>MVS_REQ_117</i>) 5. The system will display the “News Verification Progress” page 6. The use case ends Relevant agencies The use case starts when: 1. The relevant agencies clicks at the menu icon at the top left of the screen to reveal the menu contents 2. The relevant agencies clicks at the “Complaint Progress” at the side menu

	3. The system will display the “Form Submission” page 4. The relevant agencies clicks on the “View Details” button (<i>MVS_REQ_117</i>) 5. The system will display the “News Verification Progress” page 6. The use case ends
Alternative Flow	Non-Applicable
Exception Flow	1. The public user clicks at the menu icon at the top left of the screen to reveal the menu contents 2. The public person clicks at the “Form Submission” at the side menu 3. The system will display the “Form Submission” page 4. The public user clicks on the “Request Verification” button 5. The system will display the “News Verification Form” page with mandatory fields to input which are First Name, Last Name, Email, Address, News Link and Comments. 6. The public user clicks the “Cancel” button (<i>MVS_REQ_116</i>) 7. The use case ends
Post-Conditions	1. The public user can view the details of the form submitted including editing and deleting the form via the “Form Submission” page (<i>MVS_REQ_112, MVS_REQ_113</i>) 2. The public user can search for forms that they have submitted (<i>MVS_REQ_111</i>)
Rules	Non-Applicable
Constraints	The public user must submit link from the MCMC website

Manage Verification Form User Interface

The screenshot shows the 'Form Submission' page of the MVS system. It features a blue header with the title 'Form Submission' and a user profile 'User, Mai'. A sidebar on the left contains various icons. The main content area has a search bar and a 'New Submission' button. Below this, there are two submission cards. The first card, titled '5G Towers Health Impact', shows a status of 'In progress' and a 'View Details' button. The second card, titled 'Education Policy Changes', shows a status of 'Pending' and buttons for 'View Details', 'Edit', and 'Delete'.

Submission Title	Status	Actions
5G Towers Health Impact	In progress	View Details
Education Policy Changes	Pending	View Details, Edit, Delete

Figure 3.33 Form Submission page

The screenshot shows the 'News Verification Form' page of the MVS system. It features a blue header with the title 'News Verification Form' and a user profile 'User, Mai'. A sidebar on the left contains various icons. The main content area has four input fields: 'News Link', 'News Title', 'Upload File' (with an upload icon), and 'Comments'. At the bottom right, there are 'Cancel' and 'Submit' buttons.

News Link	News Title	Upload File	Comments

Figure 3.34 News verification form page

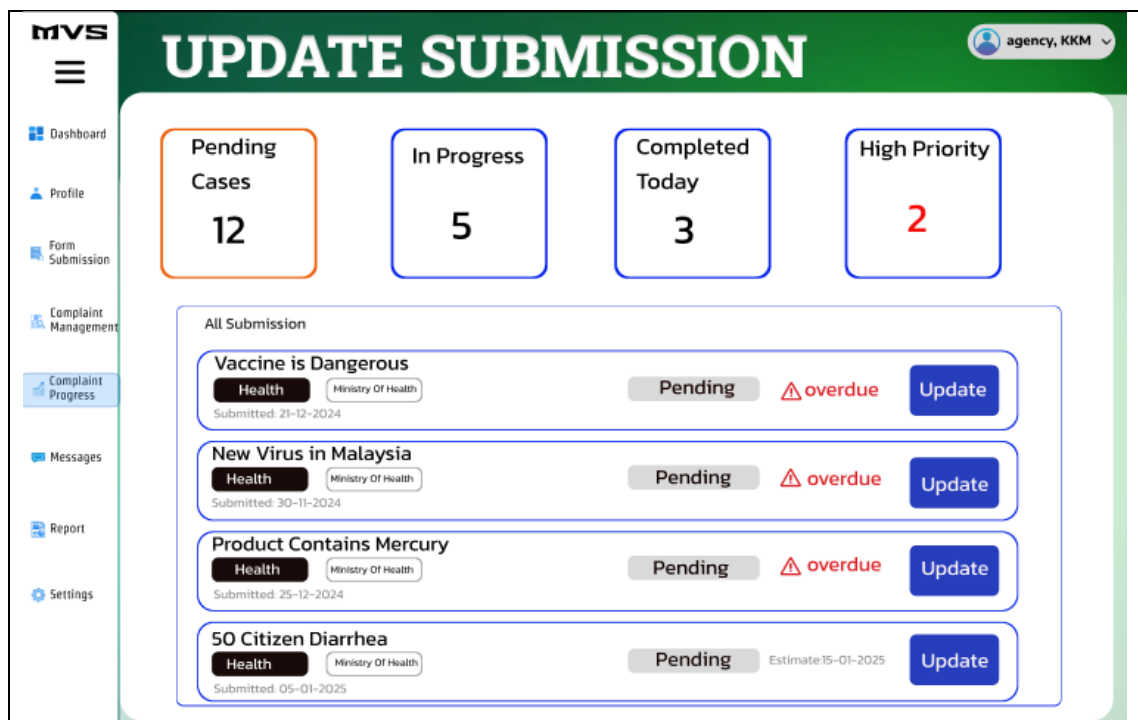

Figure 3.35 Update Submission page for MCMC

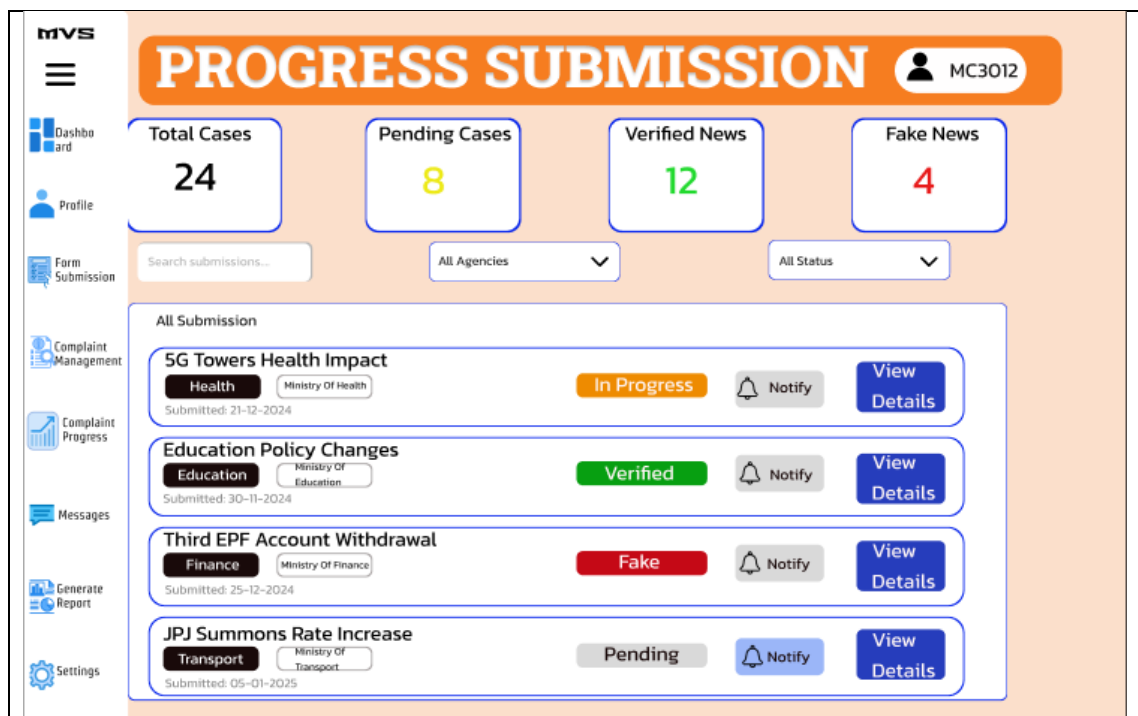

Figure 3.36 Progress Submission page for relevant agencies

Table 3.8 Manage Verification Form - User Interface Description

User Interface Name	Description
---------------------	-------------

Form Submission page	The public user can view the verification forms that they have submitted. The public user can also search for the verifications forms that they have submitted. The main page will display all the user's submitted verification forms. It will also display whether the news is still in progress or have already been verified/debunked The public user can delete the submitted form while it is still in progress. Additionally, the public user can also edit the form submitted if they found new documents to be uploaded.
News Verification Form page	The public user must enter their first name, last name, email, address, news link and comments to submit the form. The public user can additionally upload documents to further support the submission. The user can cancel the before submitting the form if they change their minds.
Update Submission page	In this MCMC interface, it allows MCMC staff to manage and track cases efficiently. MCMC can take actions like notify relevant agencies or viewing detailed information. It displays total cases, verified cases, pending cases, and fake news.
Progress Submission page	In this interface, agency can update the submission issue. This system is used by agency to review and handle claims or problems. It displays which issues are most critical, how many are being worked on, how many are completed today, and how many are still pending.

Table 3.9 Manage Report use case description

Use Case ID	SRS_MVS_UC005
Brief Description	This use case describes how relevant agencies can receive monthly report of the verification analytics
Actor	Relevant agencies
Pre-Conditions	1. Relevant agencies are connected to the internet 2. Relevant agencies are logged in the myVerify system
Basic Flow	The use case starts when: 1. The relevant agencies clicks at the menu icon at the top left of the screen to reveal the menu contents 2. The Relevant Agency clicks at “Generate Report” at side menu. 3. The system will display the Report page 4. The relevant agencies clicks on the “MCMC” button and then click the “Enter” button. 5. The system will display the Verification Form Report page (<i>MVS_REQ_119</i>) 6. The system will display Verification Form Report page. 7. The Relevant Agency clicks “Export PDF” to export the report. (<i>MVS_REQ_120</i>) 8. the use case ends.
Alternative Flow	Non-Applicable
Exception Flow	Non-Applicable
Post-Conditions	1. The relevant agencies will receive a notification when the report is ready 2. The report is sent to MCMC
Rules	Non-Applicable
Constraints	The user must be logged in a relevant agencies account

The page also shows what news the public user requested to verify the most and its status. The related agencies can also view how many news has been verified that month. The related agencies can also click the “Export PDF” button to generate a report in PDF format. The report will contain all of the data mentioned above.

3.3 MANAGE ASSIGNED COMPLAINT FORM AND MANAGE REPORT

PIC: Umi Maisarah binti Mohd Afendi (CB23036)

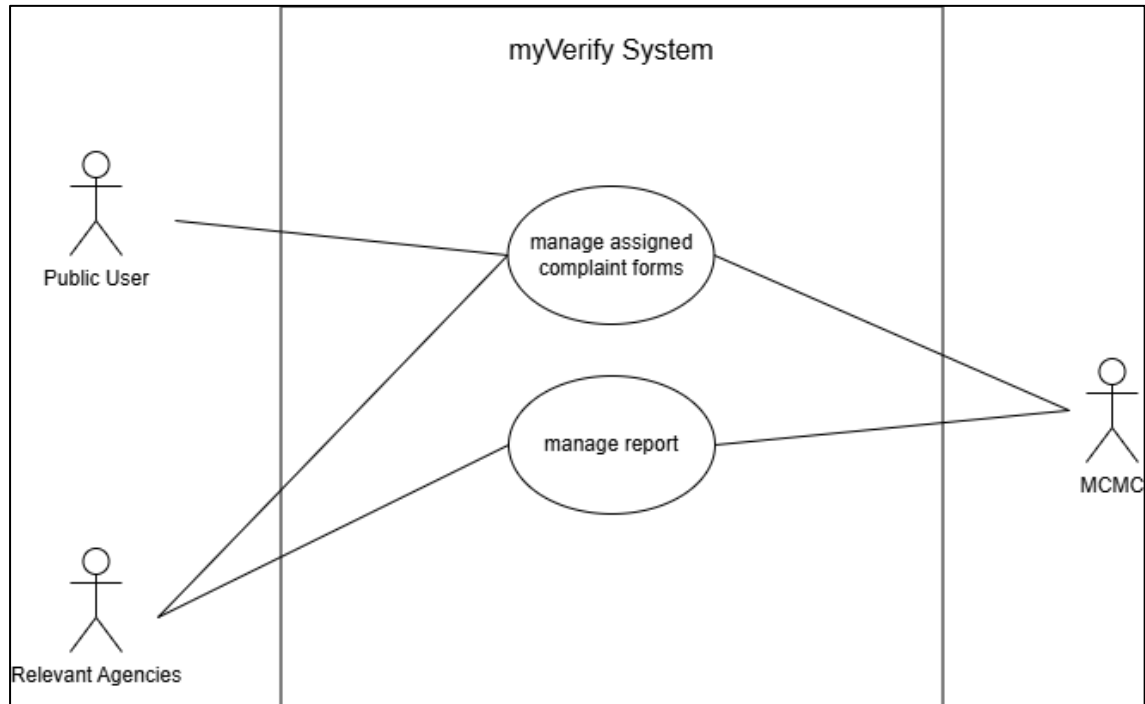

Figure 3.42 Manage Assigned Complaint Form and Manage Report use case

Manage Assigned Complaint Form Use Case Description

Table 3.11 Use Case Description for Manage Assigned Complaint Form

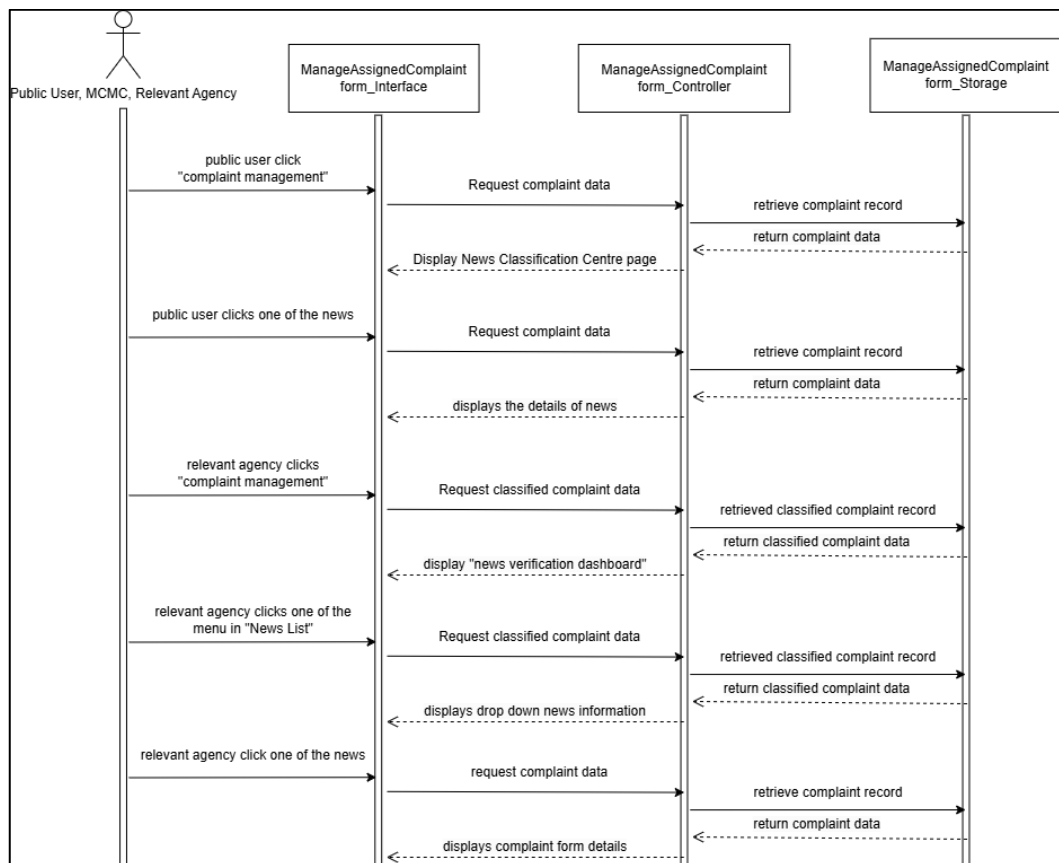

Use Case ID	SRS_MVS_UC006
Brief Description	This use case describes MCMC and Relevant Agency manage submitted fake news complaint forms from public users. MCMC can review incoming complaints, classify them based on content type using Artificial Intelligence (AI), and assign them to the appropriate verification agencies. The Relevant Agency can view the classify complaint forms and verified them easily. The Public User can view the non-verified and verified news based on the classifications.
Actor	Public User, Relevant Agency, and MCMC

Pre-Conditions	Public User, Relevant Agency, and MCMC already logged in the myVerify system (MVS).
Basic Flow	Public User The use case starts when: 1. The public user clicks at “Complaint Management” at side menu. 2. The MVS displays News Classification Center page. 3. The public user clicks one of the news. 4. The MVS displays the details of the news. [MVS_REQ_124] 5. The use case ends. MCMC The use case starts when: 1. The MCMC clicks at “Complaint Management” at side menu. 2. The MVS displays News Classification page. 3. The MCMC clicks one of the submitted forms. 4. The MVS displays the submitted form details. 5. The MCMC views the AI analysis. 6. MCMC chooses the risk level of the submitted form either “Low Risk”, “Medium Risk”, “High Risk” or “Critical Risk” at the “Risk Level”. 7. MCMC chooses the relevant agency to send the submitted form at the “Relevant Agency”. 8. MCMC adds notes about the submitted form in the “Additional Notes” 9. MCMC clicks <<Confirm Classification>> to confirm classification of the submitted form. The use case ends.

	Relevant Agency The use case starts when: 1. The Relevant Agency clicks at “Complaint Management” at side menu. 2. The MVS displays News Verification Dashboard page. 3. The Relevant Agency clicks either “All”, “Misinformation”, “Scams”, or “Phishing” at the “News List” section. 4. The MVS maximises the dropdown menus. 5. The Relevant Agency clicks one of the complaint forms that want to be verified. 6. The MVS displays the complaint form details. 7. The Relevant Agency clicks “Attached Evidence” to view evidence. 8. The Relevant Agency chooses the impact at “Impact Assessment” either the news is “Low Impact”, “Medium Impact” or “High Impact”. 9. The Relevant Agency clicks <<continue to verify>> button to complete the review. 10. The uses case ends.
Alternative Flow	Not applicable
Exception Flow	Not applicable
Post-Conditions	1. The public user can receive notification about which agency the report is sent to. 2. The Relevant Agency receives notification immediately about arrival of the newest complaint form. 3. The MCMC receives notification about the arrival of the verification report from the agency. 4. The AI analysis of the submitted news will be stored for future references.

Rules	1. Public User only can view the status or the submitted forms. 2. The AI analysis only can be viewed by the MCMC. 3. The MCMC only can classify the submitted form. 4. The Agency only can view the complaint form. 5. Only registered users can submit complaint forms.
Constraints	1. MCMC must classify the complaints forms within 24 hours of submission. 2. Complaint forms must include supporting evidence 3. Verification process must be completed within 7 days 4. Public user identification information must be private.

User Interface Name	Description
public user interface	The public can view all non-verified and verified news on this page. The public user can search their own submitted news. The public user can choose the news based on the classification. The public user can know what agency their submitted form will be sent to. The public user can know the status of the submitted form.
MCMC interface	In this page, MCMC can choose the news that need to be classify. The MVS will display the details of the submitted form. The AI will automatically analyse the submitted form based on the past references to detect the pattern of fake news. The MCMC need to confirm the classification based on the AI analysis. MCMC staff need to input the risk level, additional notes and the relevant agency before clicking the <<confirm classification>>
Relevant Agency interface	The complaint form displays based on their classification. The relevant agency can view the details of the complaint form based on the content, the attached evidence and the source of the complaint form. The relevant agency can enter the input impact assessment based on the complaint form. Once they done review the complaint form, they click the <<continue to verify>> for the next step.

Manage Report Use Case Description

Table 3.13 Use Case Description for Manage Report

Use Case ID	SRS_MVS_UC007
Brief Description	The use case describes the overall of verification analytics that the Relevant Agency received.
Actor	Relevant Agency, MCMC
Pre-Conditions	The Relevant Agency must log in to the MVS.
Basic Flow	Relevant Agency The use case starts when: 1. The Relevant Agency clicks at “Report” at side menu. 2. The MVS displays Verification Analytics page. 3. The Relevant Agency clicks <<Send Report>> to send the report to the MCMC. 4. the use case ends. MCMC The use case starts when: 1. The Relevant Agency clicks at “Report” at side menu. 2. the MCMC chooses “Relevant Agency” to view the report from the relevant agency. 3. the MCMC click <<Enter>> 4. the MVS displays the report form relevant agency. 5. The Relevant Agency clicks <<Export PDF>> to export the report. 6. the use case ends.
Alternative Flow	Not applicable
Exception Flow	Not applicable
Post-Conditions	1. the Relevant Agency receives notification the reports are ready. 2. The report sends to the MCMC.
Rules	1. Only Relevant Agency can view the report. 2. Verification agencies can only view reports related to their assignments 3. Reported must be stored for minimum 5 years 4. Automated backup of all reports every 24 hours 5. Watermark of the relevant agency required on all exported reports.
Constraints	1. MVS mut handle concurrent report generation 2. Scheduled maintenance only during off-peak hours

3.4 MANAGE PROGRESS SUBMISSION AND MANAGE REPORT

PIC: HAZIRAH BINTI ERMON CHATIB (CB23039)

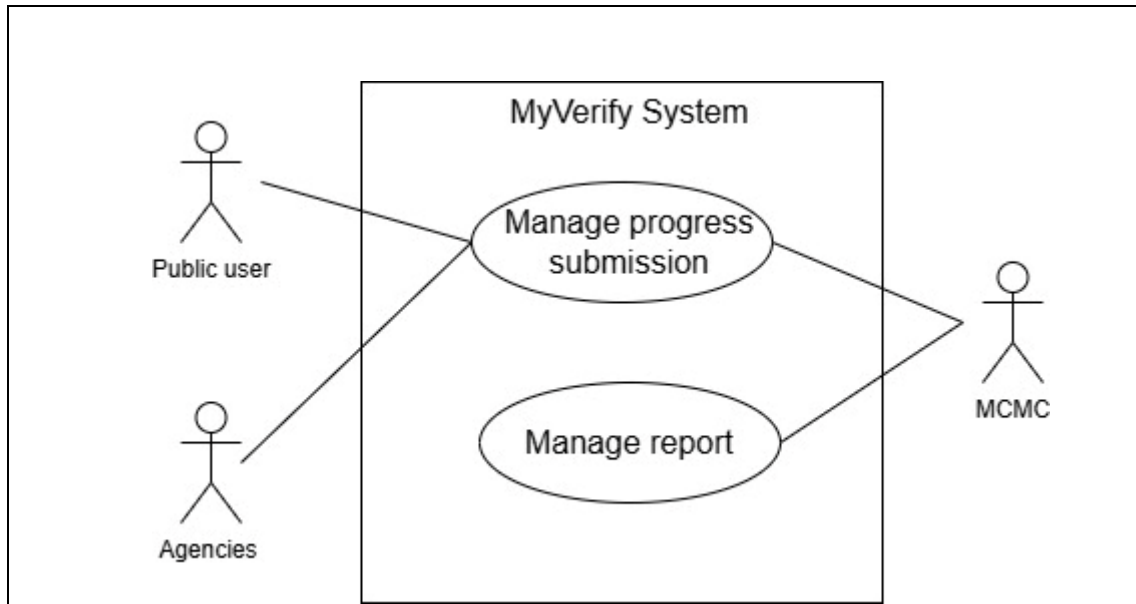

Figure 3.55 Manage Progress Submission and Manage Report use case

Manage Progress Submission Use Case Description

Table 3.15 Use Case Description for Manage Progress Submission

Use Case ID	SRS_MVS_UC008
Brief Description	This use case describes where the MCMC staff monitor the progress of validated issues that have been submitted by public users and reviewed by relevant agencies. The system ensures precise tracking and makes it possible to track updates the organization give.
Actor	MCMC Staff, Relevant Agencies, Public User
Pre-Conditions	1. All users must have valid user credential 2. An issue must be submitted by public person. 3. The issue must be attribute to the appropriate agency. 4. The MCMC staff must be able to access the system. 5. The MCMC staff must receive updates from agencies by monitoring the progress.

	6. Public users can track the status of submission.
Basic Fow	Public User interaction: 1. The system begins when public user clicks on <<Complaint Progress>> to track the status. [MVS_REQ_143] 2. The system will display status of the news submission by showing either it is verified, fake or still in progress. [MVS_REQ_143] 3. The use case ends when public user moves from complaints progress page. MCMC Staff interaction: 1. The system begins when MCMC clicks on << Complaint Progress>> to view the lists of all news submissions. 2. The MCMC will monitor the submitted issue after they submit to relevant agency for the authentication. 3. The system will display the monitoring dashboard with four statistics card which is: [MVS_REQ_150] • Total Cases • Pending Cases • Verified News • Fake News 4. The system displays overdue submissions where it is in the pending section [A2: Overdue Submission]. 5. The MCMC staff will clicks on <<Notify>> button.[MVS_REQ_153] 6. The system automatically checks and remind the agency about the issues. 7. The use case ends when MCMC staff moves from complaint progress page. Relevant Agencies interaction:

	1. The system begins when the relevant agencies staff clicks on <<Complaint Progress>> button and views assigned submission. 2. The system will display the monitoring dashboard with four statistics card which is: [MVS_REQ_146] • Pending Cases • In progress • Completed today • High priority 3. The system will display the overdue submissions section with reminder notification and click on << Update Status>>. [MVS_REQ_149] 4. The system provides two actions options: a) The agency will click on << Request More Info>> on the dashboard so the public user who submit the issue to give more information about the issues [A1: Additional Information Needed] I) The system automatically notifies the user about the issues. b) The agency will update the status of submitted issue in In progress section by click on << Mark as Verified>> or << Flag as Fake>> button to allow agency to update the status.[MVS_REQ_148] 5. The system automatically counts verified and fake submissions as complete for statistics. 6. The use case ends when agency moves from complaints progress page.
Alternative Flow	A1: Additional Information Needed

	1. Agency will request more information and find certain critical details that are missing or unclear. 2. The system will notify the public users once the agency submits the request. 3. The public user logs into the system and reviews the agency request and gather the necessary information or document and submit them to the place provided. A2: Overdue Submission 1. The agency will request more time to investigate the issue if the issue requires additional time for thorough investigation by submit a formal time extension. 2. The MCMC staff will review the request by evaluates the justification provided by the agency. 3. The MCMC will updates a news deadline to the agencies ensures that the agency given the requested additional time to complete the investigation.
Exception Flow	Not Applicable
Post-Conditions	1. The public user can view the final status of their news submission. 2. The relevant agencies will update the submission status and provide verification results. 3. The MCMC staff monitors and make sure the progress of all submissions until its resolution. 4. The system stores all updates for future reference.
Rules	1. Public user can only view their own submission. 2. Relevant agencies must provide the progress within a predefined timeframe. 3. Agencies can only update assigned cases.
Constraints	1. The system must handle multiple submissions simultaneously without performance degradation.

	2. The system must comply with data privacy and security regulations to protect user-submitted information. 3. Notifications must be sent promptly to avoid delays in the verification process. 4. The application must be accessible via both web and mobile platforms to accommodate all actors.

Table 3.16 Use Case Description for Manage Report

Use Case ID	SRS_MVS_UC009
Brief Description	This use case describes the process of generating reports related to the news submission progress and verification status.
Actor	MCMC Staff
Pre-Conditions	1. MCMC staff must log into the system. 2. MCMC staff must have appropriate permissions to access reporting features. 3. There must be existing submission data in the system. 4. MCMC staff must select the reporting criteria.
Basic Flow	1. The use case begins when MCMC staff navigate to report generation section. 2. The system displays available report types. 3. The MCMC Staff clicks at “Generate Report” at side menu. 4. The MVS displays News Progress Submission Analytics page. 5. The MCMC staff chooses the range of the days of the report. 6. MVS displays the analytics. 7. The MCMC staff clicks <<Export PDF>> to export the report. 8. The use case ends. 9. Exit.
Alternative Flow	Not applicable
Exception Flow	E1: Exit 1. MCMC staff choose to exit the system. 2. System prompts for confirmation. 3. If confirmed, system closes the report generate process. 4. System returns to main menu.
Post-Conditions	1. Report successfully generated and saved in the system. 2. MCMC staff receives the requested report in specified format.
Rules	1. MCMC staff can access all report and data. 2. Report must include timestamp and generation details.

	3. Report data must be accurate and up to date at the time of generation.
Constraints	1. Report generate should not impact system performance. 2. Report formats limited to PDF, Excel and CSV.

Manage Report Sequence Diagram

Application	API Interface and Description
ChatGPT	- An analysis tool powered by AI by Chatgpt.com ChatGPT is an AI that can help to analyse the submitted form.
Chrome	- Browser API provided by https://developer.chrome.com/ - Chrome is a browser used to access the website
MySQL Workbench 8.0 CE	- Visual tool for database design provided by https://www.mysql.com/products/workbench/ - MySQL Workbench is used to store and manipulated data received from the system.

5. REQUIREMENT TRACEABILITY

Table 5.1 Requirement Traceability for Manage User Profile – module 1

Requirement ID	Description	Interface ID
<i>MVS_REQ_101</i>	<i>Search profile</i> The MVS allows MCMC to search user profile based on their username	<i>Refer Figure 3.1.14 & 3.1.14</i>
<i>MVS_REQ_102</i>	<i>Edit Profile</i> The MVS allows Public User and Relevant Agency to edit their profile.	<i>Refer Figure 3.1.12 & 3.1.10</i>
<i>MVS_REQ_103</i>	<i>Cancel edit</i> The MVS allows Public User and Relevant Agency to cancel edit their profile	<i>Refer Figure 3.1.13 & 3.1.11</i>
<i>MVS_REQ_104</i>	<i>View Profile</i> The MVS allows Public User and Relevant Agency to view their profile in Profile section.	<i>Refer Figure 3.1.12 & 3.1.10</i>
<i>MVS_REQ_105</i>	<i>View Profile Details</i> The MVS allows MCMC to view user profile in details including their status and registration date.	<i>Refer Figure 3.1.16</i>
<i>MVS_REQ_106</i>	<i>Save Edit Profile</i> The MVS allows Public User and Relevant Agency to save their edit profile.	<i>Refer Figure 3.1. 13 & 3.1.11</i>
<i>MVS_REQ_107</i>	<i>Login</i> The system should allow users to login after they key in their details correctly.	<i>Refer Figure 3.1.9</i>
<i>MVS_REQ_108</i>	<i>Logut</i> The system should allow user to exit the system if the users click “Logout” button.	<i>Refer Figure 3.1. 12 & 3.1.10</i>
<i>MVS_REQ_119</i>	<i>Register</i> The system should allow user to register an account.	<i>Refer figure 3.1.6 – 3.1.8</i>

Table 5.2 Requirement Traceability for Manage Verification Form – module 2

Requirement ID	Description	Interface ID
<i>MVS_REQ_111</i>	<i>Search form</i> The MVS allows public users to search forms that they have submitted	Refer figure 3.2.5
<i>MVS_REQ_112</i>	<i>Edit form</i> The MVS allow public users to edit their submitted verification request form	Refer figure 3.2.5
<i>MVS_REQ_113</i>	<i>Delete form</i> The MVS allow users to delete verification forms that they have submitted	Refer figure 3.2.5
<i>MVS_REQ_114</i>	<i>View details</i> The MVS allow users to view details of the form they submitted	Refer figure 3.2.5
<i>MVS_REQ_115</i>	<i>Request verification</i> The MVS allow users to request verification of news	Refer figure 3.2.5
<i>MVS_REQ_116</i>	<i>Cancel form</i> The MVS allow users to cancel the form they are filling	Refer figure 3.2.6
<i>MVS_REQ_117</i>	<i>View details</i> The MVS allow relevant agencies and administrative staff to view details of form submitted by public user	Refer figure 3.2.10 & 3.2.11
<i>MVS_REQ_118</i>	<i>Add details</i> The MVS allow relevant agencies and administrative staff to add additional comments under the verification progress	Refer figure 3.2.12 & 3.2.13
<i>MVS_REQ_119</i>	<i>Report generation</i> <i>The system should be able to generate monthly report</i>	Refer figure 3.2.16
<i>MVS_REQ_120</i>	<i>Export to PDF</i> The system must be able to generate the report in the format of PDF	Refer figure 3.2.16
<i>MVS_REQ_121</i>	<i>Menu</i> The system must include a navigation menu that have quick access to key features	

Table 5.3 Requirement Traceability for Manage Assigned Complaint Form – module 3

Requirement ID	Description	Interface ID
MVS_REQ_121	<i>Search News</i> The MVS allows public user to search the verified or non-verified news	Refer figure 3.46
MVS_REQ_123	<i>Classification bars</i> The MVS allows public user to easily choose their preferred category of the news.	Refer figure 3.46
MVS_REQ_124	<i>Status of the news</i> The MVS allows public user to know the status of the submitted news.	Refer figure 3.46
MVS_REQ_125	<i>Relevant agency name</i> The MVS allows public user to know which agency the submitted form sent to.	Refer figure 3.46
MVS_REQ_126	<i>Search News</i> The MVS allows relevant agency to search complaint forms	Refer figure 3.48
MVS_REQ_127	<i>Case List</i> The system must display a list of submitted cases with relevant details such title, status and timestamp for actions take.	Refer figure 3.46
MVS_REQ_128	<i>Report Details</i> The system must display the detailed of the submitted form.	Refer figure 3.47 and figure 3.48
MVS_REQ_129	<i>AI analysis</i> The system must allow the AI to make the analysis according to the submitted news. the system must display the analysis by AI about Risk Indicator and Detailed Analysis	Refer figure 3.47
MVS_REQ_130	<i>Choose Risk Level</i> The system must allow MCMC staff to choose the risk level of the submitted news.	Refer figure 3.47

MVS_REQ_131	<i>Choose Relevant agency</i> The system must allow MCMC staff to choose the relevant agency to send the submitted news.	Refer figure 3.47
MVS_REQ_132	<i>Additional Notes</i> The system must allow MCMC to put the additional noted according to submitted news.	Refer figure 3.47
MVS_REQ_133	<i>Confirm Classification button</i> The system must display the confirm classification after the MCMC fill in the blank.	Refer figure 3.47
MVS_REQ_134	<i>Case List</i> The system must display a list of submitted cases with relevant details such title, status and timestamp for actions take.	Refer figure 3.48
MVS_REQ_135	<i>Search News</i> The MVS allows public user to search the verified or non-verified news	Refer figure 3.46
MVS_REQ_136	<i>Report Details</i> The system must display the detailed of the submitted form.	Refer figure 3.47
MVS_REQ_137	<i>Search News</i> The system allows public user to search the verified or non-verified news	Refer figure 3.46
MVS_REQ_138	<i>Impact assessment</i> The system allows the agency to choose the impact of the complaint form.	Refer figure 3.48
MVS_REQ_139	<i>Attached Evidence</i> The system must allow the agency to click and view the attached evidence given by the public user	Refer figure 3.48
MVS_REQ_140	<i>Done review</i> The system allows the agency to go to the next step by clicking the button.	Refer figure 3.48
MVS_REQ_141	<i>Date of reported news</i> The system displays the date of the reported of the complaint form	Refer figure 3.46 and figure 3.47 and figure 3.48

Table 5.4 Requirement Traceability for Manage Progress Submission– module 4

Requirement ID	Description	Interface ID
MVS_REQ_142	<i>New Submission</i> The system must allow public user to submit new cases or reports for verification	Refer figure 3.60
MVS_REQ_143	<i>Case List</i> The system must display a list of submitted cases with relevant details such title, status and timestamp for actions take.	Refer figure 3.60
MVS_REQ_144	<i>View Details</i> The system must allow users to view detailed information about each submitted case	Refer figure 3.60
MVS_REQ_145	<i>Search Filter</i> The system must enable public user to search for specific submissions using keyword or filters.	Refer figure 3.60
MVS_REQ_146	<i>Agency Dashboard</i> The system must display key case metrics, including the number of pending cases, in-progress, completed cases and high priority cases	Refer figure 3.62
MVS_REQ_147	<i>Case Details</i> The system must allow agency to view case details, including the case title, category, priority level, and description	Refer figure 3.62
MVS_REQ_148	<i>Case Actions</i> The system must allow agency to mark cases as “Verified”, “Fake”, or request additional information	Refer figure 3.63
MVS_REQ_149	<i>Add Updates</i> The system must enable agency to add progress updates, attach files, and select an update type for each case	Refer figure 3.62
MVS_REQ_150	<i>Post Updates</i> The system must allow users to post updates after entering progress information and attaching supporting files	Refer figure 3.63

MVS_REQ_150	<i>Staff Dashboard</i> The system must display the total number of cases, verified news, and fake news for better tracking	Refer figure 3.61
MVS_REQ_151	<i>Case Filter</i> The system must allow filtering of cases by agencies and status to enable staff to locate relevant cases efficiently	Refer figure 3.61
MVS_REQ_152	<i>Case List</i> The system must show detailed information for each submission, including title, category, assigned agency, submission date, and status	Refer figure 3.61
MVS_REQ_153	<i>Case Actions</i> The system must provide action buttons for each case, such as “Notify” for updates and “View Details” for detailed case information	Refer figure 3.61
MVS_REQ_154	<i>Case Status</i> The system must support visual identification of case status using distinct labels	Refer figure 3.61

Table 5.5 Requirement Traceability for Manage Report – module 5

Requirement ID	Description	Interface ID
MVS_REQ_155	<i>Verification Status Chart</i> The system must visually display verification status of cases	Refer figure 3.66
MVS_REQ_156	<i>Department Distribution Chart</i> The system must display the distribution of cases across different departments	Refer figure 3.66
MVS_REQ_157	<i>Navigation Menu</i> The system must include a left-side navigation menu for quick access to features like Profile, Complaint Management, Messages, and Settings	Refer figure 3.65 & Figure 3.66
MVS_REQ_158	<i>Total verification</i> The system must display the total of verification news that the relevant agency had verified	Refer figure 3.3.11
MVS_REQ_159	<i>Pending case</i> The system must display the total of pending case that the relevant agency still not verified yet.	Refer figure 3.3.11
MVS_REQ_160	<i>Critical case</i> The system must display the total of critical case that the relevant agency gets	Refer figure 3.3.11
MVS_REQ_161	<i>Priority distribution</i> The system must display the distribution of the complaint form based on their priority.	Refer figure 3.3.11
MVS_REQ_162	<i>Recent verification</i> The system must display the recent case that already verified by the agency	Refer figure 3.3.11
MVS_REQ_163	<i>Export PDF</i> The system must allow the agency to export the report to the PDF file.	Refer figure 3.3.11
MVS_REQ_164	<i>Registration Report</i> The systems must allow MCMC to view Registration Report	Refer Figure 3.1.

MVS_REQ_165	<i>Total Registration</i> The system must display the total of registration based on Public User registration.	<i>Refer Figure 3.1.20</i>
MVS_REQ_166	<i>New Registration</i> The system must display the total of new registration based on Public User new registration.	<i>Refer Figure 3.1.20</i>
MVS_REQ_167	<i>Active Users</i> The system must display the total of Active Users.	<i>Refer Figure 3.1.20</i>
MVS_REQ_168	<i>Inactive Users</i> The system must display the total of inactive users.	<i>Refer Figure 3.1.20</i>
MVS_REQ_169	<i>Monthly New Registration Chart</i> The system must display the monthly new registration chart.	<i>Refer Figure 3.1.20</i>

6. ACRONYMS AND ABBREVIATION

SRS = SOFTWARE REQUIREMENTS SPECIFICATION

UC = USE CASE

REQ = REQUIREMENTS

MVS = MyVerify System
